For those who look closely enough to see the gaps.

'The past is never dead. It's not even past.'

— William Faulkner, *Requiem for a Nun*

'The past is a foreign country; they do things differently there.'

— L.P. Hartley, *The Go-Between*

'Why do we remember the past but not the future?'

— Stephen W. Hawking, *A Brief History of Time*

'History is a nightmare from which I am trying to awake.'

— James Joyce, *Ulysses*

Contents

THE VISIBILITIES

THE FIRST VISIBILITY

The first step is always into the unknown.

— The Unseen Observer

JANUARY 1

Hidden Tesseract of Salford

Section 1

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 2

Fragmented Loop without End

Section 2

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 3

A Void of Power

Section 3

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 4

Logical Lens of the Unseen

Section 4

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 5

Tangled Tesseract against the Grain

Section 5

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 6

Neutron Dossier between Levels

Section 6

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 7

The Tesseract from the Gaps

Section 7

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 8

Shadowed Symmetry between Levels

Section 8

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 9

Visible Dossier of the Mind

Section 9

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 10

Shadowed Labyrinth of the Soul

Section 10

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 11

Visible Reflection against the Grain

Section 11

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 12

The Resonance in London

Section 12

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 13

Redacted Protocol without End

Section 13

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 14

Fragmented Prism of the Mind

Section 14

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 15

Redacted Ambition from the Gaps

Section 15

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 16

Neutron Hierarchy of the Mind

Section 16

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 17

A Hierarchy in the Night

Section 17

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 18

Shadowed Mirror from the Gaps

Section 18

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 19

Shadowed Tesseract under Pressure

Section 19

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 20

Nuclear Void of Power

Section 20

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 21

Nuclear Paradox under Pressure

Section 21

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 22

Tangled Ghost from the Gaps

Section 22

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 23

Fragmented Ambition under Pressure

Section 23

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 24

Neutron Engine in the Night

Section 24

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 25

Strange Cipher of Salford

Section 25

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 26

Strange Paradox at Oxford

Section 26

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 27

Hidden Tesseract without End

Section 27

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 28

Tangled Reflection under Pressure

Section 28

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 29

Invisible Ghost beyond Sight

Section 29

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 30

Infinite Void of the Mind

Section 30

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JANUARY 31

Visible Paradox against the Grain

Section 31

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE LEAP OF LOGIC *A leap of faith requires a leap of logic.*

— The Unseen Observer

FEBRUARY 1

Neutron Ledger against the Grain

Section 32

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 2

Infinite Paradox of the Soul

Section 33

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 3

Binary Prism of Salford

Section 34

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 4

Infinite Protocol at Oxford

Section 35

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 5

Infinite Labyrinth beyond Sight

Section 36

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 6

Nuclear Void of Power

Section 37

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 7

Infinite Dossier in the Night

Section 38

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 8

Binary Resonance in the Night

Section 39

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 9

Optical Reflection for Extra Freshness

Section 40

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 10

Quantum Resonance beyond Sight

Section 41

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 11

A Lens for Extra Freshness

Section 42

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 12

Strange Ghost from the Gaps

Section 43

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 13

Infinite Prism from the Gaps

Section 44

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 14

Fragmented Cipher of Power

Section 45

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 15

Strange Cipher of the Unseen

Section 46

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 16

Hidden Void under Pressure

Section 47

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 17

Shadowed Void of the Mind

Section 48

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 18

A Lens of Power

Section 49

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 19

Redacted Protocol of the Soul

Section 50

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 20

A Scattering from the Gaps

Section 51

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 21

Binary Tesseract at Oxford

Section 52

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 22

The Protocol under Pressure

Section 53

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 23

Optical Resonance at Oxford

Section 54

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 24

Logical Mirror of Power

Section 55

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 25

Strange Labyrinth of Power

Section 56

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 26

Redacted Ledger of the Mind

Section 57

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 27

Fragmented Void without End

Section 58

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 28

Fragmented Paradox against the Grain

Section 59

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

FEBRUARY 29

A Reflection between Levels

Section 60

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE INVISIBLE WINDS

The winds of change are often invisible.

— The Unseen Observer

MARCH 1

Strange Engine of the Soul

Section 61

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 2

Binary Protocol of the Soul

Section 62

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 3

Tangled Ledger against the Grain

Section 63

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 4

Imperial Reflection in the Night

Section 64

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 5

Invisible Prism of the Soul

Section 65

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 6

Invisible Cipher of Salford

Section 66

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 7

Echoing Reflection of the Soul

Section 67

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 8

Neutron Ghost of the Soul

Section 68

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 9

Redacted Ghost between Levels

Section 69

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 10

Recursive Protocol from the Gaps

Section 70

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 11

Recursive Dossier at Oxford

Section 71

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 12

Logical Ambition without End

Section 72

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 13

Echoing Dossier in the Night

Section 73

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 14

Echoing Symmetry for Extra Freshness

Section 74

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 15

Optical Protocol against the Grain

Section 75

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 16

A Labyrinth in London

Section 76

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 17

Redacted Hierarchy in London

Section 77

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 18

Logical Loop against the Grain

Section 78

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 19

Redacted Paradox of the Soul

Section 79

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 20

Echoing Ghost without End

Section 80

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 21

Nuclear Labyrinth from the Gaps

Section 81

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 22

Infinite Scattering of Salford

Section 82

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 23

Neutron Lens beyond Sight

Section 83

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 24

A Void of Salford

Section 84

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 25

Quantum Cipher under Pressure

Section 85

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 26

The Ambition in the Night

Section 86

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 27

Infinite Labyrinth from the Gaps

Section 87

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 28

Infinite Loop between Levels

Section 88

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 29

Echoing Hierarchy of the Soul

Section 89

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 30

Optical Labyrinth at Oxford

Section 90

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MARCH 31

Invisible Engine at Oxford

Section 91

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE DATA WASH *Showers of data wash away the noise.*

— The Unseen Observer

APRIL 1

Redacted Ghost at Oxford

Section 92

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 2

A Ledger of Salford

Section 93

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 3

Nuclear Ambition of Power

Section 94

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 4

Shadowed Ghost against the Grain

Section 95

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 5

Infinite Scattering for Extra Freshness

Section 96

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 6

Redacted Ambition of Salford

Section 97

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 7

Imperial Protocol of the Soul

Section 98

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 8

Quantum Scattering under Pressure

Section 99

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 9

Nuclear Resonance of Salford

Section 100

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 10

Imperial Tesseract in London

Section 101

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 11

Infinite Prism in London

Section 102

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 12

Logical Loop between Levels

Section 103

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 13

Binary Ghost from the Gaps

Section 104

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 14

Neutron Scattering against the Grain

Section 105

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 15

Quantum Lens of the Soul

Section 106

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 16

Recursive Prism beyond Sight

Section 107

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 17

A Void against the Grain

Section 108

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 18

Invisible Loop of Salford

Section 109

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 19

Hidden Hierarchy of Salford

Section 110

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 20

Strange Paradox in the Night

Section 111

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 21

Visible Labyrinth from the Gaps

Section 112

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 22

Nuclear Protocol beyond Sight

Section 113

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 23

Strange Mirror beyond Sight

Section 114

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 24

Hidden Tesseract from the Gaps

Section 115

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 25

Hidden Symmetry from the Gaps

Section 116

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 26

Visible Ghost under Pressure

Section 117

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 27

Picowaved for Extra Freshness

Section 118

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 28

Redacted Ghost of the Mind

Section 119

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 29

The Ledger of Salford

Section 120

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

APRIL 30

Nuclear Hierarchy in the Night

Section 121

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE HIDDEN ROOTS

Blossoming patterns reveal hidden roots.

— The Unseen Observer

MAY 1

Binary Lens against the Grain

Section 122

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 2

A Resonance without End

Section 123

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 3

A Resonance from the Gaps

Section 124

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 4

Nuclear Dossier beyond Sight

Section 125

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 5

Visible Labyrinth of Salford

Section 126

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 6

Nuclear Scattering in the Night

Section 127

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 7

Quantum Ledger beyond Sight

Section 128

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 8

The Hierarchy in London

Section 129

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 9

Optical Ledger in London

Section 130

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 10

Strange Ledger beyond Sight

Section 131

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 11

Picowaved for Extra Freshness

Section 132

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 12

Shadowed Engine beyond Sight

Section 133

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 13

Strange Cipher from the Gaps

Section 134

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 14

Picowaved for Extra Freshness

Section 135

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 15

Shadowed Scattering without End

Section 136

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 16

Quantum Ledger under Pressure

Section 137

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 17

Neutron Loop of the Soul

Section 138

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 18

Nuclear Dossier in the Night

Section 139

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 19

Imperial Scattering without End

Section 140

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 20

Imperial Reflection beyond Sight

Section 141

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 21

Invisible Mirror of Salford

Section 142

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 22

Imperial Cipher beyond Sight

Section 143

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 23

Neutron Symmetry in London

Section 144

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 24

Logical Hierarchy at Oxford

Section 145

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 25

A Scattering of Salford

Section 146

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 26

Fragmented Ghost against the Grain

Section 147

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 27

Quantum Paradox of the Unseen

Section 148

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 28

Redacted Ambition under Pressure

Section 149

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 29

Fragmented Hierarchy under Pressure

Section 150

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 30

Imperial Ledger of Salford

Section 151

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

MAY 31

Optical Protocol for Extra Freshness

Section 152

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE SHORTEST SHADOW *The longest day sees the shortest shadows.*

— The Unseen Observer

JUNE 1

Tangled Ghost between Levels

Section 153

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 2

Picowaved for Extra Freshness

Section 154

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 3

Echoing Cipher of the Mind

Section 155

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 4

Neutron Paradox from the Gaps

Section 156

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 5

Quantum Engine without End

Section 157

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 6

Invisible Ambition against the Grain

Section 158

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 7

The Labyrinth between Levels

Section 159

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 8

Logical Ghost against the Grain

Section 160

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 9

Shadowed Prism of the Soul

Section 161

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 10

Visible Lens from the Gaps

Section 162

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 11

Redacted Void under Pressure

Section 163

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 12

Strange Engine in London

Section 164

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 13

Visible Labyrinth from the Gaps

Section 165

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 14

Invisible Resonance of Power

Section 166

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 15

A Paradox from the Gaps

Section 167

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 16

Echoing Mirror at Oxford

Section 168

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 17

Binary Reflection of the Soul

Section 169

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 18

Tangled Dossier without End

Section 170

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 19

Imperial Symmetry in the Night

Section 171

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 20

Visible Cipher without End

Section 172

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 21

Hidden Paradox of the Mind

Section 173

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 22

Redacted Ambition without End

Section 174

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 23

Hidden Hierarchy at Oxford

Section 175

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 24

The Loop without End

Section 176

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 25

Infinite Reflection of the Soul

Section 177

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 26

Neutron Tesseract at Oxford

Section 178

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 27

A Loop of the Soul

Section 179

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 28

Nuclear Void of Salford

Section 180

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 29

Shadowed Scattering between Levels

Section 181

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JUNE 30

The Lens in the Night

Section 182

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE HEAT MIRAGE *Heat reveals the mirage of the real.*

— The Unseen Observer

JULY 1

Optical Lens in London

Section 183

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 2

Shadowed Tesseract of Power

Section 184

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 3

Logical Hierarchy between Levels

Section 185

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 4

Infinite Reflection against the Grain

Section 186

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 5

Hidden Cipher under Pressure

Section 187

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 6

Strange Scattering at Oxford

Section 188

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 7

Fragmented Cipher of the Mind

Section 189

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 8

Echoing Dossier from the Gaps

Section 190

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 9

Hidden Ambition from the Gaps

Section 191

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 10

Quantum Paradox against the Grain

Section 192

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 11

Neutron Labyrinth of the Unseen

Section 193

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 12

Optical Hierarchy against the Grain

Section 194

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 13

Binary Tesseract of the Mind

Section 195

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 14

Imperial Prism of Power

Section 196

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 15

Quantum Prism beyond Sight

Section 197

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 16

Binary Cipher against the Grain

Section 198

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 17

Hidden Scattering in London

Section 199

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 18

Infinite Labyrinth in London

Section 200

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 19

A Void of the Mind

Section 201

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 20

Binary Dossier in the Night

Section 202

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 21

The Labyrinth of the Unseen

Section 203

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 22

A Paradox for Extra Freshness

Section 204

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 23

Visible Ledger at Oxford

Section 205

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 24

Neutron Void of Salford

Section 206

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 25

Recursive Loop between Levels

Section 207

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 26

Invisible Prism beyond Sight

Section 208

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 27

Echoing Labyrinth in London

Section 209

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 28

Hidden Resonance against the Grain

Section 210

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 29

A Ghost in the Night

Section 211

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 30

Logical Loop for Extra Freshness

Section 212

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

JULY 31

Visible Void from the Gaps

Section 213

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE STRANGE HARVEST

Harvesting the fruits of a strange loop.

— The Unseen Observer

AUGUST 1

Echoing Resonance from the Gaps

Section 214

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 2

Echoing Hierarchy from the Gaps

Section 215

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

Hidden Resonance in the Night

Section 224

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 12

Invisible Dossier in the Night

Section 225

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 13

Invisible Hierarchy between Levels

Section 226

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 14

Shadowed Reflection from the Gaps

Section 227

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 15

Infinite Loop beyond Sight

Section 228

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 16

Hidden Tesseract under Pressure

Section 229

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 17

Redacted Paradox of the Soul

Section 230

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 18

Visible Resonance beyond Sight

Section 231

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 19

Hidden Scattering for Extra Freshness

Section 232

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 20

Nuclear Ambition from the Gaps

Section 233

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 21

Fragmented Ghost in the Night

Section 234

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 22

Hidden Ambition from the Gaps

Section 235

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 23

Shadowed Void of the Mind

Section 236

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 24

Redacted Ghost of Salford

Section 237

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 25

Shadowed Loop without End

Section 238

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 26

The Mirror of the Unseen

Section 239

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 27

Quantum Hierarchy in the Night

Section 240

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 28

Hidden Labyrinth from the Gaps

Section 241

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 29

Binary Scattering between Levels

Section 242

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 30

Recursive Mirror beyond Sight

Section 243

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

AUGUST 31

Imperial Cipher of the Soul

Section 244

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE MENTAL EQUINOX *The equinox of the mind.*

— The Unseen Observer

SEPTEMBER 1

Nuclear Labyrinth under Pressure

Section 245

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 2

Strange Hierarchy of the Soul

Section 246

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 3

Binary Ambition at Oxford

Section 247

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 4

A Labyrinth in the Night

Section 248

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 5

Strange Mirror without End

Section 249

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 6

Visible Prism without End

Section 250

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 7

The Cipher for Extra Freshness

Section 251

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 8

Tangled Lens against the Grain

Section 252

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 9

Invisible Resonance against the Grain

Section 253

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 10

Neutron Dossier of Salford

Section 254

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 11

Fragmented Dossier in the Night

Section 255

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 12

Infinite Resonance of Power

Section 256

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 13

Fragmented Mirror under Pressure

Section 257

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 14

Logical Ambition of Salford

Section 258

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 15

Echoing Engine of the Mind

Section 259

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 16

Visible Protocol of the Mind

Section 260

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 17

Shadowed Paradox from the Gaps

Section 261

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 18

Strange Cipher for Extra Freshness

Section 262

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 19

Nuclear Mirror beyond Sight

Section 263

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 20

Tangled Resonance in London

Section 264

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 21

Strange Tesseract beyond Sight

Section 265

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 22

Logical Void in London

Section 266

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 23

Hidden Mirror without End

Section 267

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 24

A Ambition of the Unseen

Section 268

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 25

Fragmented Engine against the Grain

Section 269

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 26

Quantum Dossier against the Grain

Section 270

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 27

Shadowed Reflection of the Mind

Section 271

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 28

Fragmented Paradox for Extra Freshness

Section 272

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 29

Tangled Labyrinth beyond Sight

Section 273

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

SEPTEMBER 30

Recursive Reflection without End

Section 274

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE LENGTHENING LIGHT

Shadows lengthen, but the light is clearer.

— The Unseen Observer

OCTOBER 1

Tangled Protocol under Pressure

Section 275

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 2

Logical Void between Levels

Section 276

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 3

Quantum Dossier of the Soul

Section 277

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 4

Visible Scattering of Power

Section 278

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 5

A Void from the Gaps

Section 279

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 6

Invisible Ambition for Extra Freshness

Section 280

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 7

Quantum Reflection of the Unseen

Section 281

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 8

Strange Ledger under Pressure

Section 282

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 9

Binary Prism without End

Section 283

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 10

Infinite Labyrinth under Pressure

Section 284

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 11

Invisible Loop for Extra Freshness

Section 285

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 12

Quantum Dossier of the Mind

Section 286

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 13

Quantum Dossier for Extra Freshness

Section 287

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 14

Recursive Loop for Extra Freshness

Section 288

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 15

Echoing Resonance between Levels

Section 289

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 16

Shadowed Labyrinth against the Grain

Section 290

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 17

Fragmented Mirror between Levels

Section 291

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 18

Invisible Symmetry for Extra Freshness

Section 292

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 19

Nuclear Hierarchy without End

Section 293

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 20

Fragmented Void from the Gaps

Section 294

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 21

Recursive Hierarchy between Levels

Section 295

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 22

Optical Lens of Power

Section 296

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 23

Picowaved for Extra Freshness

Section 297

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 24

Binary Resonance without End

Section 298

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 25

Hidden Protocol in the Night

Section 299

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 26

Fragmented Ledger beyond Sight

Section 300

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 27

Imperial Reflection in London

Section 301

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 28

Infinite Void of the Soul

Section 302

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 29

A Engine of the Mind

Section 303

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 30

Binary Symmetry between Levels

Section 304

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

OCTOBER 31

Tangled Protocol at Oxford

Section 305

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE FOG OF DISGUISE *Fog is just visibility in disguise.*

— The Unseen Observer

NOVEMBER 1

Imperial Paradox of the Unseen

Section 306

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 2

Redacted Paradox for Extra Freshness

Section 307

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 3

Tangled Engine against the Grain

Section 308

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 4

Echoing Resonance beyond Sight

Section 309

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 5

Quantum Protocol without End

Section 310

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 6

The Cipher of the Unseen

Section 311

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 7

Recursive Tesseract at Oxford

Section 312

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 8

Imperial Reflection of the Soul

Section 313

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 9

Strange Tesseract between Levels

Section 314

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 10

Visible Mirror of the Mind

Section 315

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 11

Picowaved for Extra Freshness

Section 316

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 12

Picowaved for Extra Freshness

Section 317

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 13

Quantum Reflection in the Night

Section 318

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 14

The Ghost without End

Section 319

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 15

Recursive Engine for Extra Freshness

Section 320

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 16

Tangled Resonance without End

Section 321

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 17

Imperial Prism of the Mind

Section 322

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 18

Picowaved for Extra Freshness

Section 323

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 19

Invisible Symmetry under Pressure

Section 324

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 20

Fragmented Tesseract of Power

Section 325

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 21

Invisible Protocol from the Gaps

Section 326

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 22

The Ledger from the Gaps

Section 327

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 23

Invisible Ambition against the Grain

Section 328

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 24

Recursive Cipher in London

Section 329

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 25

The Hierarchy of the Mind

Section 330

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 26

Invisible Hierarchy of Power

Section 331

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 27

Neutron Tesseract under Pressure

Section 332

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 28

Infinite Reflection in the Night

Section 333

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 29

Binary Labyrinth of Salford

Section 334

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

NOVEMBER 30

Recursive Reflection without End

Section 335

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

THE CLOSING CIRCLE

The circle closes, but the loop continues.

— The Unseen Observer

DECEMBER 1

Imperial Cipher of Salford

Section 336

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 2

Binary Symmetry in the Night

Section 337

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 3

Nuclear Symmetry of Salford

Section 338

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 4

Binary Void against the Grain

Section 339

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 5

Visible Lens in the Night

Section 340

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 6

Strange Dossier of Power

Section 341

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 7

The Resonance between Levels

Section 342

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 8

Nuclear Scattering from the Gaps

Section 343

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 9

A Labyrinth in the Night

Section 344

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 10

Hidden Protocol at Oxford

Section 345

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 11

Hidden Mirror at Oxford

Section 346

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 12

Invisible Mirror in the Night

Section 347

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 13

The Paradox of the Mind

Section 348

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 14

Echoing Ghost under Pressure

Section 349

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 15

Strange Loop in London

Section 350

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 16

The Resonance of the Soul

Section 351

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 17

Imperial Paradox between Levels

Section 352

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 18

Infinite Paradox of Power

Section 353

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 19

Optical Ledger of Salford

Section 354

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 20

Invisible Symmetry for Extra Freshness

Section 355

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 21

Hidden Ghost of the Mind

Section 356

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 22

Nuclear Loop of Power

Section 357

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 23

The Void for Extra Freshness

Section 358

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 24

Invisible Reflection of Salford

Section 359

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 25

Optical Mirror of the Mind

Section 360

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 26

Logical Cipher at Oxford

Section 361

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 27

A Ambition between Levels

Section 362

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 28

Fragmented Labyrinth in London

Section 363

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 29

Fragmented Void from the Gaps

Section 364

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 30

Fragmented Labyrinth beyond Sight

Section 365

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

DECEMBER 31

A Ghost for Extra Freshness

Section 366

This is the placeholder text for this day. The logic of the seen and the unseen unfolds here, in the space between the lines. Every neutron scattered is a thought redirected; every loop closed is a story begun.

ACHILLES: I feel as though we have been here before, Mr. T.

TORTOISE: In a recursive world, Achilles, 'before' is just another word for 'again'.

BACK MATTER *"The map is not the territory."*

Annotated Bibliography

Gödel, Escher, Bach Bibliography

Bibliography

Bibliography The presence of two asterisks indicates that the hook or article was a prime motivator of my book. The presence of a single asterisk means that the book or article has some special feature or quirk which I want to single out. I have not given many direct pointers into technical literature; instead I have chosen to give "meta-pointers": pointers to books which have pointers to technical literature.

Allen, John. The Anatomy of LISP. New York: McGraw-Hill, 1978. The most comprehensive book on LISP, the computer language which has dominated Artificial Intelligence research for two decades. Clear and crisp. Anderson, Alan Ross, ed. Minds and Machines. Englewood Cliffs, N. J.: PrenticeHall, 1964. Paperback. A collection of provocative articles for and against Artificial Intelligence. Included are Turing's famous article "Computing Machines and Intelligence" and Lucas' exasperating article "Minds, Machines, and Godel". Babbage, Charles. Passages from the Life of a Philosopher. London: Longman, Green, 1864. Reprinted in 1968 by Dawsons of Pall Mall (London). A rambling selection of events and musings in the life of this little-understood genius. There's even a play starring Turnstile, a retired philosopher turned politician, whose favorite musical instrument is the barrel-organ. I find it quite jolly reading. Baker, Adolph. Modern Physics and Anti-physics. Reading, Mass.: Addison-Wesley, 1970. Paperback. A book on modern physics-especially quantum mechanics and relativity-whose unusual feature is a set of dialogues between a "Poet" (an antiscience "freak") and a "Physicist". These dialogues illustrate the strange problems which arise when one person uses logical thinking in defense of itself while another turns logic against itself. Ball, W. W. Rouse. "Calculating Prodigies", in James R. Newman, ed. The World of Mathematics, Vol. 1. New York: Simon and Schuster, 1956. Intriguing descriptions of several different people with amazing abilities that rival computing machines. Barker, Stephen F. Philosophy of Mathematics. Englewood Cliffs, N. J.: Prentice-Hall. 1969. A short paperback which discusses Euclidean and non-Euclidean geometry, and then Godel's Theorem and related results without any mathematical forms lism. * Beckmann, Petr. A History of Pi. New York: St. Martin's Press, 1976.

Paperback. Actually, a history of the world, with pi as its focus. Most entertaining, as well as a useful reference on the history of mathematics. * Bell, Eric Temple. Men of Mathematics. New York: Simon & Schuster, 1965. Paperback. Perhaps the most romantic writer of all time on the history of mathematics. He makes every life story read like a short novel. Nonmathematicians can come away with a true sense of the power, beauty, and meaning of mathematics. Benacerraf, Paul. "God, the Devil, and Godel". Monist 51 (1967): 9. One of the most important of the many attempts at refutation of Lucas. All about mechanism and metaphysics, in the light of Godel's work. Benacerraf, Paul, and Hilary Putnam. Philosophy of Mathematics-Selected Readings. Englewood Cliffs, N. J.: Prentice-Hall, 1964. Articles by Godel, Russell, Nagel, von

Bibliography 745

Neumann, Brouwer, Frege, Hilbert, Poincare, Wittgenstein, Carnap, Quine, and others on the reality of numbers and sets, the nature of mathematical truth, and so on. * Bergerson, Howard. Palindromes and Anagrams. New York: Dover Publications, 1973. Paperback. An incredible collection of some of the most bizarre and unbelievable wordplay in English. Palindromic poems, plays, stories, and so on. Bobrow, D. G., and Allan Collins, eds. Representation and Understanding: Studies in Cognitive Science. New York: Academic Press, 1975. Various experts on Artificial Intelligence thrash about, debating the nature of the elusive "frames", the question of procedural vs. declarative representation of knowledge, and so on. In a way, this book marks the start of a new era of AI: the era of representation. * Boden, Margaret. Artificial Intelligence and Natural Man. New York: Basic Books, 1977. The best hook I have ever seen on nearly all aspects of Artificial Intelligence, including technical questions, philosophical questions, etc. It is a rich book, and in niv opinion, a classic. Continues the British tradition of clear thinking and expression on matters of mind, free will, etc. Also contains an extensive technical bibliography. . Purposive Explanation in Psychology. Cambridge, Mass.: Harvard University Press, 1972. The book to which her AI book is merely- "an extended footnote", says Boden. * Boeke, Kees. Cosmic View: The Universe in 40 Jumps. New York: John Day, 1957. The ultimate book on levels of description. Everyone should see this book at some point in their life. Suitable for children. ** Bongard, M. Pattern Recognition. Rochelle Park, N. J.: Hay den Book Co., Spartan Books, 1970. The author is concerned with problems of determining categories in an ill-defined space. In his book, he sets forth a magnificent collection of 100

"Bongard problems" (as I call them)-puzzles for a pattern recognizer (human or machine) to test its wits on. They are invaluably stimulating for anyone whoo is interested in the nature of intelligence. Boolos, George S., and Richard Jeffrey. Computability and Logic. New York: Cambridge University Press. 1974. A sequel to Jeffrey's Formal Logic. It contains a wide number of results not easily obtainable elsewhere. Quite rigorous, but this does not impair its readability. Carroll, John B., Peter Davies, and Barry Rickman. The American Heritage Word Frequency Book. Boston: Houghton Mifflin, and New York: American Heritage Publishing Co., 1971. A table of words in order of frequency in modern written American English. Perusing it reseals fascinating things about out- thought processes. Cerf, Vinton. "Parry Encounters the Doctor". Datamation, July 1973, pp. 62-64. The first meeting of artificial "minds"-what a shock! Chadwick, John. The Decipherment of Linear B. New York: Cambridge University Press, 1958. Paperback. A book about a classic decipherment-that of a script from the island of Cretedone by a single man: Michael Ventris. Chaitin, Gregory J. "Randomness and Mathematical Proof"'. Scientific American, May 1975. An article about an algorithmic definition of randomness, and its intimate relation to simplicity. These two concepts are tied in with Godel's Theorem, which assumes a new meaning. An important article. Cohen, Paul C. Set Theory and the Continuum Hypothesis. Menlo Park, Calif.: W. A. Benjamin, 1966. Paperback. A great contribution to modern mathematics-the demonstration that various statements are undecidable within the usual formalisms for

Bibliography 746

set theory-is here explained to nonspecialists by its discoverer. The necessary prerequisites in mathematical logic are quickly, concisely, and quite clearly presented. Cooke, Deryck. The Language of Music. New York: Oxford University Press, 1959. Paperback. The only book that I know which tries to draw an explicit connection between elements of music and elements of human emotion. A valuable start down what is sure to be a long hard road to understanding music and the human mind. * David, Hans Theodore.J. S. Bach's Musical Offering. New York: Dover Publications, 1972. Paperback. Subtitled "History, Interpretation, and Analysis". A wealth of information about this tour de force by Bach. Attractively written. ** David, Hans Theodore, and Arthur Mendel. The Bach Reader. New York: W. W. Norton, 1966. Paperback. An excellent annotated collection of original source material on Bach's life, containing pictures, reproductions of manuscript pages, many short quotes from contemporaries, anecdotes, etc., etc. Davis, Martin.

The Undecidable. Hewlett, N. Y.: Raven Press, 1965. An anthology of some of the most important papers in metamathematics from 1931 onwards (thus quite complementary to van Heijenoort's anthology). Included are a translation of Godel's 1931 paper, lecture notes from a course which Godel once gave on his results, and then papers by Church, Kleene, Rosser, Post, and Turing. Davis, Martin, and Reuben Hersh. "Hilbert's Tenth Problem". Scientific American, November 1973, p. 84. How a famous problem in number theory was finally shown to be unsolvable, by a twenty-two-year old Russian. ** DeLong, Howard. A Profile of Mathematical Logic. Reading, Mass.: Addison- Wesley, 1970. An extremely carefully written book about mathematical logic, with an exposition of Godel's Theorem and discussions of many philosophical questions. One of its strong features is its outstanding, fully annotated bibliography. A book which influenced me greatly. Doblhofer, Ernst. Voices in Stone. New York: Macmillan, Collier Books, 1961. Paper back. A good hook on the decipherment of ancient scripts. * Drevfus, Hubert. What Computers Can't Do: A Critique of Artificial Reason. New York:Harper & Roc-, 1972. A collection of many arguments against Artificial Intelligence from someone outside of the field. Interesting to try to refute. The Al community and Drevfus enjoy a relation of strong mutual antagonism. It is important to have people like Dreyfus around, even if you find them very irritating. Edwards, Harold M. "Fermat's Last Theorem". Scientific American, October 1978, pp. 104-122. A complete discussion of this hardest of all mathematical nuts to crack, from its origins to the most modern results. Excellently illustrated. * Ernst, Bruno. The Magic Mirror of M. C. Escher. New York: Random House, 1976. Paperback. Escher as a human being, and the origins of his drawings, are discussed with devotion by a friend of mans' years. A "must" for any lover of Escher. ** Escher, Maurits C., et al. The World of M. C. Escher. New York: Harry N. Abrarns, 1972. Paperback. The most extensive collection of reproductions of Escher's works. Escher comes about as close as one can to recursion in art, and captures the spirit of Godel's Theorem in some of his drawings amazingly well, Feigenbaum, Edward, and Julian Feldman, eds. Computers and Thought. New York: McGraw-Hill, 1963. Although it is a little old now, this book is still an important collection of ideas about Artificial Intelligence. Included are articles on Gelernters

Bibliography 747

geometry program, Samuel's checkers program, and others on pattern recognition, language understanding, philosophy, and so on. Finsler, Paul. "Formal Proofs and Undecidability", Reprinted in van Heijenoorcs anthology

From Frege to Godel (see below). A forerunner of Godel's paper, in which the existence of undecidable mathematical statements is suggested, though not rigorously demonstrated. Fitzpatrick, P. J. "To Godel via Babel"- Mind 75 (1966): 332-350. An innovative exposition of Godel's proof which distinguishes between the relevant levels by using three different languages: English, French, and Latin' * Gablik, Suzi. Magritte. Boston, Mass.: New York Graphic Society, 1976. Paperback. An excellent book on Magritte and his works by someone who really understands their setting in a wide sense; has a good selection of reproductions. * Gardner, Martin. Fads and Fallacies. New York: Dover Publications, 1952. Paperback. Still probably the best of all the anti-occult books. Although probably not intended as a book on the philosophy of science, this book contains many lessons therein. Over and over, one faces the question, "What is evidence?" Gardner demonstrates how unearthing "the truth" requires art as much as science. Gebstadter, Egbert B. Copper, Silver, Gold: an Indestructible Metallic Alloy. Perth: Acidic Books, 1979. A formidable hodge-podge, turgid and confused-yet remarkably similar to the present work. Professor Gebstadter's Shandean digressions include some excellent examples of indirect self-reference. Of particular interest is a reference in its well-annotated bibliography to an isomorphic, but imaginary, book. ** Godel, Kurt. On Formally Undecidable Propositions. New York: Basic Books, 1962. A translation of Godel's 1931 paper, together with some discussion. . "Uber Formal Unentscheidbare Satze der Principia Mathematica and Verwandter Systeme, I." Monatshefte fur Mathematik and Physik, 38 (1931), 173-198. Godel's 1931 paper. Golf man, Ering. Frame Analysis. New York: Harper & Row, Colophon Books, 1974. Paperback. A long documentation of the definition of "systems" in human communication, and how in art and advertising and feporting and the theatre, the borderline between "the system" and "the world" is perceived and exploited and violated. Goldstein, Ira. and Seymour Papert. "Artificial Intelligence, Language, and the Study of Knowledge". Cognitive Science 1 (January l9/ 7): 84-123. A survey article concerned with the past and future of Al. The authors see three periods so far: "Classic", "Romantic,., and "Modern". Guod, I. I. "Human and Machine Logic". British Journal for the Philosophy of Science In (196/): 144. One of the most interesting attempts to refute Lucas, having to do with whether the repeated application of the diagonal method is itself a mechanizable operation. . "Godel's Theorem is a Red Herring". British Journal for the Philosophy of Science 19 (1969): 357. In which Good maintains that Lucas' argument has nothing to do with Godel's Theorem, and that

Lucas should in fact have entitled his article "Minds, Machines, and Transfinite Counting". The Good-Lucas repartee is fascinating. Goodman, Nelson. Fact, Fiction, and Forecast. 3rd ed. Indianapolis: Bobbs-Merrill, 1973. Paperback. A discussion of contrary-to-fact conditionals and inductive logic, including

Bibliography 748

Goodman's famous problem-words "bleen" and "grue". Bears very much on the question of how humans perceive the world, and therefore interesting especially from the Al perspective. Press, 1976. A short hook about bees, apes, and other animals, and whether or not they are "conscious"-and particularh whether or not it is legitimate to use the word "consciousness" in scientific explanations of animal behavior. deGroot, Adriaan. Thought and Choice in Chess. The Hague: Mouton, 1965. A thorough study in cognitive psychology, reporting on experiments that have a classical simplicity and elegance. Gunderson, Keith. Mentality and Machines. New York: Doubleday, Anchor Books, 1971. Paperback. A very anti-Al person tells why. Sometimes hilarious. Hanawalt, Philip C., and Robert H. Haynes, eds. The Chemical Basis of Life. San Francisco: W. H. Freeman, 1973. Paperback. An excellent collection of reprints from the Scientilic American. One of the best ways to get a feeling for what molecular biology is about. Hardy G. H. and E. M. Wright. An Introduction to the Theory of Numbers, 4th ed. New York: Oxford University Press, 1960. The classic book on number theory. Chock-full of information about those mysterious entities. the whole numbers. Harmon, Leon. "The Recognition of Faces". Scientific American, November 1973, p. 70. Explorations concerning how we represent faces in our memories, and how much information is needed in what form for us to be able to recognize a face. One of the most fascinating of pattern recognition problems. van Heijenoort, Jean. From Frege to Godel: A Source Book in Mathematical Logic. Cambridge, Mass.: Harvard University Press, 1977. Paperback. A collection of epoch- making articles on mathematical logic, all leading up to Godel's climactic revelation, which is the final paper in the book. Henri, Adrian. Total Art: Environments, Happenings, and Performances. New York: Praeger, 1974. Paperback. In which it is shown how meaning has degenerated so far m modern art that the absence of meaning becomes profoundly meaningful (whatever that means). * Goodstein, R. L. Development of Mathematical Logic. New York: Springer Verlag, 1971. A concise survey of mathematical logic, including much material not easily found elsewhere. An enjoyable book, and useful as a reference. Gordon, Cyrus. Forgotten Scripts.

New York: Basic Books, 1968. A short and nicely written account of the decipherment of ancient hieroglyphics, cuneiform, and other scripts. Griffin, Donald. The Question of Animal Awareness. New York: Rockefeller University von Foerster, Heinz and James W. Beauchamp, eds. Music by Computers. New York: ** John Wiles', 1969. This book contains not only a set of articles about various types of computer-produced music, but also a set of four small phonograph records so you can actually hear (and judge) the pieces described. Among the pieces is Max Mathews' mixture of "Johnny Comes Marching Home" and "The British Grenadiers". Fraenkel, Abraham, Yehoshua Bar-Hillel, and Azriel Levy. Foundations of Set Theory, 2nd ed. Atlantic Highlands, N. J.: Humanities Press, 1973. A fairly nontechnical

discussion of set theory, logic, limitative Theorems and undecidable statements. Included is a long treatment of intuitionism. * Frev, Peter W. Chess Skill in Man and Machine. New York: Springer Verlag, 1977. Anexcellent survey of contemporary ideas in computer chess: why programs work, why they don't work, retrospects and prospects. Friedman, Daniel P. The Little Lisper. Palo Alto, Calif.: Science Research Associates, 1974. Paperback. An easily digested introduction to recursive thinking in LISP. You'll eat it up! • Hoare, C. A. R, and D. C. S. Allison. "Incomputability". Computing Surveys 4, no. 3 September 1972). A smoothly presented exposition of why the halting problem is unsolvable. Proves this fundamental theorem: "Any language containing conditionals and recursive function definitions which is powerful enough to program its own interpreter cannot be used to program its own 'terminates' function." • Hofstadter, Douglas R. "Energy levels and wave functions of Bloch electrons in rational and irrational magnetic fields". Physical Review B, 14, no. 6 (15 September 1976). The author's Ph.D. work, presented as a paper. Details the origin of "Gplot", the recursive graph shown in Figure 34. Hook, Sidney. ed. Dimensions of Mind. New York: Macmillan, Collier Books, 1961. Paperback. A collection of articles on the mind-body problem and the mind-computer problem. Some rather strong-minded entries here. • Hornev, Karen. Self-Analysis. New York: W. W. Norton, 1942. Paperback. A fascinating description of how the levels of the self must tangle to grapple with problems of self-definition of any individual in this complex world. Humane and insightful. Hubbard, John I. The Biological Basis of Mental Activity. Reading, Mass.: AddisonWesley, 1975. Paperback. Just one more book about the brain, with one special virtue. however: it contains man long lists of questions for the reader to ponder,

and references to articles which treat those questions. • Jackson. Philip C. Introduction to Artificial Intelligence. New York, Petrocelli Charter. 1975. A recent book, describing, with some exuberance, the ideas of Al. There are a huge number of vaguely suggested ideas floating around this book, and for that reason it is very stimulating just to page through it. Has a giant bibliography, which is another reason to recommend it. Jacobs, Robert L. Understanding Harmony. New York: Oxford University Press, 1958. Paperback. A straightforward book on harmony, which can lead one to ask many questions about why it is that conventional Western harmony has such a grip on our brains. Jaki, Stanley L. Brain, Mind, and Computers. South Bend. Ind.: Gateway Editions, 1969. Paperback. A polemic book whose every page exudes contempt for the computational paradigm for understanding the mind. Nonetheless it is interesting to ponder the points he brings up. • Jauch, J. M. Are Quanta Real? Bloomington, Ind.: Indiana University Press, 1973. A delightful little book of dialogues, using three characters borrowed from Galileo, put in a modern setting. Not only are questions of quantum mechanics discussed, but also issues of pattern recognition, simplicity, brain processes, and philosophy of science enter. Most enjoyable and provocative.

Bibliography 750

• Jeffrey, Richard. Formal Logic: Its Scope and Limits. New York: McGraw-Hill, 1967. An easy-to-read elementary textbook whose last chapter is on Godel's and Church's Theorems. This book has quite a different approach from many logic texts, which makes it stand out. • Jensen, Hans. Sign, Symbol, and Script. New York: G. P. Putnam's, 1969. A-or perhaps the-top-notch book on symbolic writing systems the world over, both of now and long ago. There is much beauty and mystery in this book-for instance, the undeciphered script of Easter Island. Kalmar, Laszlo. "An Argument Against the Plausibility of Church's Thesis". In A. Heyting, ed. Constructivity in Mathematics: Proceedings of the Colloquium held at Amsterdam, 1957, North-Holland, 1959. An interesting article by perhaps the bestknown disbeliever in the Church-Turing Thesis. * Kim, Scott E. "The Impossible Skew Quadrilateral: A Four-Dimensional Optical Illusion". In David Brisson, ed. Proceedings of the 1978 A.A.A.S. Sym osium on Hypergraphics: Visualizing Complex Relationships in Art and Science. Boulder, Colo.: Westview Press, 1978. What seems at first an inconceivably hard idea-an optical illusion for four-dimensional "people"-is gradually made crystal clear, in an amazing virtuoso presentation utilizing a long series of excellently executed diagrams. The form of this article is just as intriguing and unusual as its content: it is

tripartite on many levels simultaneously. This article and my book developed in parallel and each stimulated the other. Kleene, Stephen C. Introduction to Mathematical Logic. New York: John Wiley, 1967. A thorough, thoughtful text by an important figure in the subject. Very worthwhile. Each time I reread a passage, I find something new in it which had escaped me before. . Introduction to Metamathematics. Princeton: D. Van Nostrand (1952). Classic work on mathematical logic; his textbook (above) is essentially an abridged version. Rigorous and complete, but oldish. Kneebone G. J. Mathematical Logic and the Foundations of Mathematics. New York: Van Nostrand Reinhold, 1963. A solid book with much philosophical discussion of such topics as intuitionism, and the "reality" of the natural numbers, etc. Koestler, Arthur. The Act of Creation, New York: Dell, 1966. Paperback. A wide-ranging and generally stimulating theory about how ideas are "bisociated" to yield novelty. Best to open it at random and read, rather than begin at the beginning. Koestler, Arthur and J. R. Smythies, eds. Beyond Reductionism. Boston: Beacon Press, 1969. Paperback. Proceedings of Yr conference whose participants all were of the opinion that biological systems cannot be explained reductionistically, and that there is something "emergent" about life. I am intrigued by books which seem wrong to me, yet in a hard-to-pin-down way. ** Kutbose, Gyomay. Zen Koans. Chicago: Regnerv, 1973. Paperback. One of the best collections of koans available. Attractively presented- An essential book for any Zen library. Kuffler, Stephen W. and John G. Nicholls. From Neuron to Brain. Sunderland, deals Mss.: Smauer Associates, 1976. Paperback. A book which, despite its title, deals mostly with microscopic processes in the brain, and quite little with the way people's thoughts come out of the tangled mess. The work of Hubel and Wiesel on visual systems is covered particularly well.

Bibliography 751

Lacey Huh, and Geoffrey Joseph. "What the Godel Formula Says". Mind 77 (1968)- 7 . A useful discussion of the meaning of the Godel formula, based on a strict separation of three levels: uninterpreted formal system, interpreted formal system, a metamathematics. Worth studying. Latos Imre. Proofs and Refutations. New York: Cambridge University Press, 1976. Paperback. A most entertaining book in dialogue form, discussing how concepts are formed in mathematics. Valuable not only to mathematicians, but also to people interested in thought processes. ** Lehninger, Albert. Biochemistry. New York: Worth Publishers, 1976. A wonderfully readable text, considering its technical level. In this book one can find many ways in which

proteins and genes are tangled together. Well organized, and exciting. ** Lucas, J. R. "Minds, Machines, and Godel". Philosophy 36 (1961): 112. This article is reprinted in Anderson's Minds and Machines, and in Sayre and Crosson's The Modeling of Mind. A highly controversial and provocative article, it claims to show that the human brain cannot, in principle, be modeled by a computer program. The argument is based entirely on Godel's Incompleteness Theorem, and is a fascinating one. The prose is (to my mind) incredibly infuriating-vet for that very reason, it makes humorous reading. "Satan Stultified: A Rejoinder to Paul Benacerraf". Monist 52 (1968): 145. Anti-Benacerraf argument, written in hilariously learned style: at one point Lucas refers to Benacerraf as "self-stultifyingly eristic" (whatever that means). The Lucas- Benacerraf battle, like the Lucas-Good battle, offers much food for thought. . "Human and Machine Logic: A Rejoinder". British Journal for the Philosophy of Science 19 (1967): 155. An attempted refutation of Good's attempted refutation of Lucas' original article. ** MacGillavry, Caroline H. Symmetry Aspects of the Periodic Drawings of M. C. Escher. Utrecht: A. Oosthoek's Uitgevermaatschappij, 1965. A collection of tilings of the plane by Escher, with scientific commentary by a crystallographer. The source for some of my illustrations-e.g., the Ant Fugue and the Crab Canon. Reissued in 1976 in New York by Harry N. Abrams under the title Fantasy and Symmetry. MacKay, Donald M. Information, Mechanism and Meaning. Cambridge, Mass.: M.I.T. Press, 1970. Paperback. A book about different measures of information, applicable in different situations; theoretical issues related to human perception and understanding; and the way in which conscious activity can arise from a mechanistic underpinning. • Mandelbrot, Benoit. Fractals: Form, Chance, and Dimension. San Francisco: W. H. Freeman, 1977. A rarity: a picture book of sophisticated contemporary research ideas in mathematics. Here, it concerns recursively defined curves and shapes, whose dimensionality is not a whole number. Amazingly, Mandelbrot shows their relevance to practically every branch of science. • McCarthy, John. "Ascribing Mental Qualities to Machines". To appear in Martin Ringle, ed. Philosophical Perspectives in Artificial Intelligence. New York: Humanities Press, 1979. A penetrating article about the circumstances under which it would make sense to say that a machine had beliefs, desires, intentions, consciousness, or free will. It is interesting to compare this article with the book by Griffin. Meschkowski, Herbert. Non-Euclidean Geometry. New York: Academic Press, 1964. Paperback. A short book with good historical commentary.

Bibliography 752

Meyer, can. "Essai d'application de certains modeles cybernetiq ues it la coordina_Lion c1Jei les insectes sociaux". Insertes Sociaux Xl11, no. 2 1966 : o which ch aws some parallels between the neural organization in the(brain, and the organiz ae lion of an ant colon%. Meyer, Leonard B. Emotion and Meaning in Music. Chicago: University of' Chicago Press, 1956. Paperback. A book which attempts to use ideas of Gestalt svcholo theory of perception to explain why musical structure is as it is. One of the more unusual the books on music and mind. . Music, The Arts, and Ideas. Chicago: University of Chicago Press, 1967. Paperback. A thoughtful analysis of mental processes involved in listening to music, and of hierarchical structures in music. The author compares modern trends in music with Zen Buddhism. Miller, G. A. and P. N. joint son-Laird. Language and Perception-Cambridge, Mass.: Harvard University Press, Belknap Press, 1976. A fascinating compendium of linguistic facts and theories, hearing on Whorl 's hypothesis that language is the same as worldviesv. A typical example is the discussion of the weird "mother-in-law" language of the Dyirbal people of Northern Queensland: a separate language used only for speaking to one's mother-in-law. Minsky, Marvin L. "Matter, Mind, and Models". In Marvin L. Minskv, ed. Son antic Information Processing. Cambridge, Mass.: M.I.T. Press, 1968. Though merely a few pages long, this article implies a whole philosophy of consciousness and machine intelligence. It is a memorable piece of writing by one of the deepest thinkers in the field. Minsky, Marvin L., and Seymour Papert_.92-t cial Intelligence Progress Report. Cambridge, Mass.: M.I.T. Artificial Intelligence Laboratory, Al Memo 252, 1972. A survey of all the work in Artificial Intelligence done at M.I.T. up to 1972, relating it to psychology and epistemology. Could serve excellently as an introduction to Al. Monod, Jacques. Chance and Necessity. New York: Random House, Vintage Books, 1971. Paperback. An extremel fertile mind writing in an idiosyncratic way about fascinating questions, such as how life is constructed out of non-life: how evolution, seeming_to violate the second law of thermodynamics, is actually dependent on it. The book excited me deeply. * Morrison, Philip and Emil, eds. Charles Babbage and his Calculating Engines. Nesv York: Dover Publications, 1961. Paperback. A valuable source of information about the life of Babbage. A large fraction of Babbage's autobiography is reprinted here, along with several articles about Babbage's machines and his "Mechanical Notation". Mvhill, John. "Some Philosophical Implications of Mathematical Logic". Review of Metaphysics 6 (1952):

165. An unusual discussion of ways in which Godel's Theorem and Church's Theorem are connected to psychology and epistemology. Ends up in a discussion of beauty and creativity. Nagel, Ernest. The Structure of Science. New York: Harcourt, Brace, and World, 1961. A classic in the philosophy of science, featuring clear discussions of reductionism vs. holism, teleological vs. nonteleological explanations, etc. Nagel, Ernest and James R. Newman. Godel's Proof. New York: New York University Press, 1958. Paperback. An enjoyable and exciting presentation, which was, in many ways, the inspiration for my own book.

Bibliography 753

* Nievergelt, Jurg, J. C. Farrar, and E. M. Reingold. Computer Approaches to Mathe,nat teal Problems. Englesyood Clif-f-s, N. J.: Prentice-Hall, 1974. An unusual collection of different types of problems which can be and have been attacked on computers-for instance, the "3n + I problem" (mentioned in my Rria with Diverse Variations) and other problems of number theory. Pattee, Howard H., ed. Hierarchy Theory. New York: George Braziller, 1973. Paperback. Subtitled "The Challenge of Complex Systems". Contains a good article by Herbert Simon covering some of the same ideas as does my Chapter on "Levels of Description". Peter, R6zsa. Recursive Functions. New York: Academic Press, 1967. A thorough discussion of primitive recursive functions, general recursive functions, partial recursive functions, the diagonal method, and many other fairly technical topics. Quine, Willard Van Ornman. The Ways of Paradox, and Other Essays. New York: Random House, 1966. A collection of Quine's thoughts on many topics. The first essay deals with carious sorts of paradoxes, and their resolutions. In it, he introduces the operation I call "quining" in my book. lishiRanganathan, S. R. Ramanujan, The Man and the Mathematician. London: Asia Pubng House, 1967. An occult-oriented biography of the Indian genius by an admirer. An odd but charming book. Reichardt. Jasia. Cybernetics, Arts, and Ideas. Boston: New York Graphic Society, 197 1. A weird collection of ideas about computers and art, music, literature. Some of it is definitely off the deep end-hut some of it is not. Examples of the latter are the articles "A Chance for Art" by J. R. Pierce, and "Computerized Haiku" by Margaret Masterman.Renyi, Alfred. Dialogues on Mathematics. San Francisco: Holden-Day, 1967. Paper hack. Three simple but stimulating dialogues involving classic characters in history, trying to get at the nature of mathematics. For the general public. ** Rips Paul. Zen Flesh, Zen Bones. New York: Doubleday, Anchor Books. Paperback. This book imparts very well the

flavor of Zen-its antirational, antilanguage, antireduc iionistic, basically holistic orientation.Rogers, Hartley. Theory of Recursive Functions and Effective Computability. New York:McGraw-Hill, 1967. A highly technical treatise, but a good one to learn from. Containsdiscussions of many intriguing problems in set theory and recursive function theory. Rokeach, Milton. The Three Christs of' Ypsilanti. New York: Vintage Books, 1964.paperback. A study of schizophrenia and the strange breeds of "consistency" which arise in the afflicted. A fascinating conflict between three men in a mental institution, all of whom imagined they were God, and how they dealt with being brought face to face for many months. Rose, Steven. The Conscious Brain, updated ed. New York: Vintage Books, 1976. Paperback. An excellent book-probably the best introduction to the study of the brain. Contains full discussions of the physical nature of the brain, as well as philosophical discussions on the nature_of mind, reductionism vs. holism, free will vs. determinism, etc. from a broad, intelligent, and humanistic viewpoint. Only his ideas on Al are way off. Rosenblueth, Arturo. Mind and Brain: A Philosophy of Science. Cambridge, Mass.:M.I.T. Press, 1970. Paperback. A well written book by a brain researcher who deals with most of the deep problems concerning mind and brain.

Bibliography 754

* Sagan, Carl, ed. Communication with Extraterrestrial Intelligence. Cambridge, Mass.: M.I.T. Press, 1973. Paperback. Transcripts of a truly far-out conference, where a stellar group of scientists and others battle it out on this speculative issue. Salmon, Wesley, ed. Zeno's Paradoxes. New York: Bobbs-Merrill, 1970. Paperback. A collection of articles on Zeno's ancient paradoxes, scrutinized under the light of modern set theory, quantum mechanics, and so on. Curious and thought-provoking, occasionally humorous. Sanger. F., et al. "Nucleotide sequence of bacteriophage 16X174 DNA", Nature 265 (Feb. 24, 1977). An exciting presentation of the first laying-bare ever of the full hereditary material of any organism. The surprise is the double-entendre: two proteins coded for in an overlapping way: almost too much to believe. Sayre, Kenneth M., and Frederick J. Crosson. The Modeling of Mind: Computers and Intelligence. New York: Simon and Schuster, Clarion Books, 1963. A collection of philosophical comments on the idea of Artificial Intelligence by people from a wide range of disciplines. Contributors include Anatol Rapoport, Ludwig Wittgenstein, Donald Mackay, Michael Scriven, Gilbert Ryle, and others. * Schank, Roger, and Kenneth Colby.

Computer Models of Thought and Language. San Francisco: W. H. Freeman, 1973. A collection of articles on various approaches to the simulation of mental processes such as language-understanding, belief-systems, translation, and so forth. An important Al book, and many of the articles are not hard to read, even for the layman. Schrodinger, Erwin. What is Life? & Mind and Matter. New York: Cambridge University Press, 1967. Paperback. A famous book by a famous physicist (one of the main founders of quantum mechanics). Explores the physical basis of life and brain; then goes on to discuss consciousness in quite metaphysical terms. The first half, What is Life?, had considerable influence in the 1940's on the search for the carrier of genetic information. Shepard, Roger N. "Circularity in judgments of Relative Pitch". Journal of the Acoustical Society of America 36, no. 12 (December 1964), pp. 2346-2353. The source of the amazing auditory illusion of "Shepard tones". Simon, Herbert A. The Sciences of the Artificial. Cambridge, Mass.: M.I.T. Press, 1969. Paperback. An interesting book on understanding complex systems. The last chapter, entitled "The Architecture of Complexity", discusses problems of reductionism versus holism somewhat. Smart, J. J. C. "Godel's Theorem, Church's Theorem, and Mechanism". Synthese 13 (1961): 105. A well written article predating Lucas' 1961 article, but essentially arguing against it. One might conclude that you have to be Good and Smart, to argue against Lucas... ** Smullvan, Raymond. Theory of Formal Systems. Princeton, N. J.: Princeton University Press, 1961. Paperback. An advanced treatise, but one which begins with a beautiful discussion of formal systems, and proves a simple version of Godel's Theorem in an elegant way. Worthwhile for Chapter 1 alone. What Is the Name of This Book? Englewood Cliffs, N. J.: Prentice-Hall, 1978. A book of puzzles and fantasies on paradoxes, self-reference, and Godel's Theorem. Sounds like it will appeal to many of the same readers as my book. It appeared after mine was all written (with the exception of a certain entry in my bibliography).

Bibliography 755

Sommerhoff, Gerd. The Logic of the Living Brain. New York: John Wiley, 1974. A book which attempts to use knowledge of small-scale structures in the brain, in creating a theory of how the brain as a whole works. Sperrv, Roger. "Mind, Brain, and Humanist Values". In John R. Platt, ed. .Vew Views on the Nature of Man. Chicago: University of Chicago Press, 1965, A pioneering neurophvsiologist here explains most vividly how he reconciles brain

activity and consciousness. * Steiner, George. After Babel: Aspects of Language and Translation. New York: Oxford University Press, 1975. Paperback. A book by a scholar in linguistics about the deep problems of translation and understanding of language by humans. Although AI is hardly discussed, the tone is that to program a computer to understand a novel or a poem is out of the question. A well written, thought-provoking-sometimes infuriating- book. Stenesh, J. Dictionary of Biochemistry. New York: John Wiley, Wiley-Interscience, 1975. For me, a useful companion to technical books on molecular biology. ** Stent, Gunther. "Explicit and Implicit Semantic Content of the Genetic Information". In The Centrality of Science and Absolute Values, Vol. 1. Proceedings of the 4th International Conference on the Unity of the Sciences, New York, 1975. Amazingly enough, this article is in the proceedings of a conference organized by the nowinfamous Rev. Sun Mvung Moon. Despite this, the article is excellent. It is about whether a genotype can be said, in any operational sense, to contain "all" the information about its phenotype. In other words, it is about the location of meaning in the genotype. . Molecular Genetics: A Historical Narrative. San Francisco: W. H. Freeman, 1971. Stent has a broad, humanistic viewpoint, and conveys ideas in their historical perspective. An unusual text on molecular biology. Suppes, Patrick. Introduction to Logic. New York: Van Nostrand Reinhold, 1957. A standard text, with clear presentations of both the Propositional Calculus and the Predicate Calculus. My Propositional Calculus stems mainly from here. Sussman, Gerald Jay. A Computer Model of Skill Acquisition. New York: American Elsevier, 1975. Paperback. A theory of programs which understand the task of programming a computer. The questions of how to break the task into parts, and of how the different parts of such a program should interact, are discussed in detail. ** Tanenbaum, Andrew S. Structured Computer Organization. Englewood Cliffs, N. J.: Prentice-Hall, 1976. Excellent: a straightforward, extremely well written account of the many levels which are present in modern computer systems. It covers microprogramming languages, machine languages, assembly languages, operating systems, and many other topics. Has a good, partially annotated, bibliography. Tarski, Alfred. Logic, Semantics, Metamathematics. Papers from 1923 to 1938. Translated by J. H. Lot, New York: Oxford University Press, 1956. Sets forth Tarski's ideas about truth, and the relationship between language and the world it represents. These ideas are still having repercussions in the problem of knowledge representation in Artificial Intelligence. Taube, Mortimer. Computers and Common Sense. New York:

McGraw-Hill, 1961. Paperback. Perhaps the first tirade against the modern concept of Artificial Intelligence. Annoying.

Bibliography 756

Tietze, Heinrich. Famous Problems of Mathematics. Baltimore: Graylock Press, 1965. A book on famous problems, written in a very personal and erudite style. Good illustrations and historical material. Trakhtenbrot, V. Algorithms and Computing Machines. Heath. Paperback. A discussion of theoretical issues involving computers, particularly unsohable problems such as the halting problem, and the word-equisalence problem. Short. which is nice. Turing, Sara. Alan M. Turing. Cambridge, U. K.: WW'. Hefter & Sons, 1959. A biography of the great computer pion4r. A mother's work of love. * Ulam, Stanislaw. Adventures of a Mathematician. New York: Charles Scribner's, 1976. An autobiography written by a sixty-five-year old man who writes as if he were still twenty and drunk in love with mathematics. Chock-full of gossip about who thought who was the best, and who envied whom, etc. Not only fun, but serious. ,A'aitson, J. D. The Molecular Biology of the Gene, 3rd edition. Menlo Park, Calif.: W. A. Benjamin, 1976. A good book but not nearly as well organized as Lehninger's, in my opinion. Still almost every page has something interesting on it. Webb, Judson. "Metamathematics and the Philosophy of Mind". Philosophy of Science 35 (1968): 156. A detailed and rigorous argument against Lucas, which contains this conclusion: "My overall position in the present paper may be stated by saying that the mind-machine-GOdel problem cannot be coherently treated until the constructivity problem in the foundations of mathematics is clarified." Weiss, Paul. "One Plus One Does Not Equal Two". In G. C. Quarton, T. Melnechuk, and F. O. Schmitt, eds. The Neurosciences:.4 Study Program. New York: Rockefeller University Press, 1967. An article trying to reconcile holism and reductionism, but a good bit too holism-oriented for my taste. * Weizenbaum, Joseph. Computer Power and Human Reason. San Francisco: W. H. Freeman, Freeman, 19i6. Paperback. A provocative book by an early At worker who has come to the conclusion that much work in computer science, particularly in AI, is dangerous. Although I can agree with him on some of his criticisms, I think he goes too far. His sanctimonious reference to AI people as "artificial intelligentsia" is funny the first time, but becomes tiring after the dozenth time. Anyone interested in computers should read it. Wheeler, William Morton. "The Ant-Colony as an Organism".Journal of Morphology 22, 2 (1911): 307-325. One of the foremost authorities of his time on insects gives a famous statement about why an ant colony deserves the label "organism" as

much as its parts do. Whitely, C. H. "Minds, Machines, and Godel: A Reply to Mr Lucas". Philosophy 37 (1962): 61. A simple but potent reply to Lucas' argument. Wilder, Raymond. An Introduction to the Foundations of :Mathematics. New York: John Wiley, 1952. A good general overview, putting into perspective the important ideas of the past century. * Wilson, Edward O. The Insect Societies. Cambridge, Mass.: Harvard University Press, elknap Press, 1971. Paperback. The authoritative book on collective behavior of insects. Although it is detailed, it is still readable, and discusses many fascinating ideas. It has excellent illustrations, and a giant (although regrettably not annotated) bibliography. Winograd, Terry. Five Lectures on Artificial Intelligence. AI Memo 246. Stanford, Calif.: Stanford University Artificial Intelligence Laboratory, 1974. Paperback. A description of fundamental problems in At and new ideas for attacking them, by one of the

Bibliography 757

important contemporary workers in the field.. Language as a Cognitive Process. Reading, Mass.: Addison-Wesley (forthcoming). From what I have seen of the manuscript, this will be a most exciting book, dealing with language in its full complexity as no other book ever has. . Understanding Natural Language. New York: Academic Press, 1972. A detailed discussion of one particular program which is remarkably "smart", in a limited world. The book shows how language cannot be separated from a general understanding of the world, and suggests directions to go in, in writing programs which can use language in the way that people do. An important contribution; many ideas can be stimulated by a reading of this book. . "On some contested suppositions of generative linguistics about the scientific study of language", Cognition 4:6. A droll rebuttal to a head-on attack on Artificial Intelligence by some doctrinaire linguists. * Winston, Patrick. Artificial Intelligence. Reading, Mass.: Addison-Wesley, 1977. A strong, general presentation of many facets of At by a dedicated and influential young proponent. The first half is independent of programs; the second half is LISP-dependent and includes a good brief exposition of the language LISP. The book contains many pointers to present-day At literature. ed. The Psychology of Computer Vision. New York: McGraw-Hill. 1975. Silly title, but fine book. It contains articles on how to program computers to do visual recognition of objects. scenes. and so forth. The articles deal with all levels of the problem, from the detection of line segments to the general organization of knowledge. In particular, there is an article by Winston himself on a program he wrote which develops abstract concepts from concrete examples, and an article

by Minsky on the nascent notion of "frames". * Wooldridge, Dean. Mechanical Man-The Physical Basis of Intelligent Life. New York: NJ McGraw-Hill, 1968. Paperback. A thorough-going discussion of the relationship of mental phenomena to brain phenomena, written in clear language. Explores difficult philosophical concepts in novel was, shedding light on them by means of concrete examples.

Bibliography 758

Metamagical Themas Bibliography

Anderson, Alan Ross; ed. Minds and Machines. Englewood Cliffs, NJ.: Prentice-Hall, 1964. A classic collection of stimulating articles on the mind-body problem, including Alan Turing's important paper "Computing Machinery and Intelligence", and J.R. Lucas' provocative "Minds, Machines, and Gödel". Applewhite, Philip. Molecular Gods: How Molecules Determine Our Behavior. Englewood Cliffs, NJ.: Prentice-Hall, 1981. A book whose subtitle helped spark my "Careenium" dialogue (Chapter 25). Atlan, Henri. Entre le cristal et la fumee: Essai sur l organisation du vivant. Paris: Editions du Seuil, 1979. A biologist who views life as the emergence of ordered complexity out of randomness here explains his philosophy. Axelrod, Robert. The Evolution of Cooperation. New York: Basic Books, 1984. A beautifully written account of how mutually beneficial behavior-that is, cooperation-can emerge among purely egoistic organisms that share an environment over time. Ayala, Franciscp Jose and Theodosius Dobzhansky, eds. Studies in the Philosophy of Biology: Reduction and Related Problems. Berkeley: University of California Press, 1974. The proceedings of one of the most fascinating conferences I have ever heard about. Many great biological thinkers were present, and discussed the most fundamental questions about how life and minds can be reconciled with physical law. I wish I had been therel Bandelow, Christoph. Inside Rubik's Cube and Beyond. Boston: Birkhfiuser, 1982- A clear and mathematically oriented book about the Cube and its successors. Perhaps the best of all the Cube books in English. Barr, Avron. "Artificial Intelligence: Cognition as Computation". In The Study of Information: Interdisciplinary Messages, edited by Fritz hlachlup and Una Mansfield. New York: Wiley-Interscience, 1983. A paper putting forward the orthodox Al dogma. that mental activity is "information processing"-more specifically, that the manipulation of "symbols" (representational data structures) by suitable computer programs is no more and no less than what minds do. Beck, Anatole

and David Fowler. "A Pandora's Box of Non-Games". In Seven Years of Manifold, . edited by Ian Stewart and John Jaworski. Nantwich, England: Shiva Publications, 1981. An amusing collection of silly pseudo-games with more of a moral than might first meet the eye. Beckett, Samuel. Waiting for Godot. New York: Evergreen, 1954. The classic existential drama in which meaninglessness pervades-and at whose core is the famous nonsensical verbal vomit emitted from the mouth of the sad sack named "Lucky". Benton, William. Normal Meanings. Paducah, Ky.: Deer Crossing Press, 1978. A book of strangely evocative poems, a bit comprehensible in parts, totally incomprehensible in others. Bernstein, Leonard. The Joy of Music. New York: Simon & Schuster, 1959. An exciting medley of ideas by this exuberantly articulate thinker and musician. His dialogues are especially enjoyable. Biggs, John R. Letterforms and Lettering. Poole, England: Blandford Press, 1977. One of the best books on the fluidity of letterforms I have run across. Includes short sections on other languages, such as Hebrew, Chinese, and Arabic. Blesser, Barry et al. "Character Recognition based on Phenomenological Attributes". Visible Language 7, no. 3 (Summer 1973). An early article by researchers who clearly had come to appreciate the depth of the letter-recognition problem. Bloch, Arthur. Murphy's Law; Murphy's Law, Book Two; Murphy's Law, Book Thres. Los Angeles: Price/Stern/Sloan, 1977, 1980, 1982. Humorous and cynical observations about the human condition, featuring many self-referential or self-undermining aphorisms. Boeke, Kees. Cosmic View: The Universe in 40 jumps. New York: John Day, 1957. A book to instill humility and awe in anyone, as well as a vivid sense of the meaning of the term "astronomical number".

'Bombaugh, Charles Carroll. Oddities and Curiosities of Words And literature, edited annotated by Martin Gardner. New York: Dover, 1961. An antique collection of palindromes, acrostics, pangrams, and so on, for wordmongers and people who love the bizarre fringes of language. (Gardner's footnotes at the back are the best part of the book.) Boole, George. The Laws of Thought. New York: Dover, 1961. A reprint of the old classic from the mid-1850's. The hubris of the title is quite remarkable, especially in light of what 130 years' progress has revealedl Brams, Steven, Morton D. Davis, and Philip Strafin, Jr. "The Geometry of the Arms Race". International Studies Quarterly 23, no. 4 (December 1979): 567-88. Looking at international behavior in terms of the iterated Prisoner's Dilemma and similar payoff matrices. Brilliant, Ashleigh. I May Not Be Perfect, but Parts of Me Are Excellent: I Have Abandoned My Search for Truth, and Am Now Looking for a Good Fantasy;

Appreciate Me Now and Avoid the Rush ; I Feel Much Better, Now That I've Given Up Hope. Santa Barbara, Calif.: Woodbridge Press, 1979-1984. Four books containing many incisive epigrams about life, death,, love, relationships, greed, egotism, loneliness, fear, and so on. None is longer than seventeen words. Bush, Donald J. The Streamlined Decade. New York: George Braziller, 1975. Showing how the style of an era permeates its creations in all media. Full of elegant photos. Compare with the books by Loeb and McCall (see below). Byrd, Donald. "Music Notation by Computer". Ph.D. thesis, Indiana University Computer - Science Department. Bloomington, 1984. About the problems of developing a computer program that will have some "understanding" of the subtleties of music notation. The program, SMUT, produced the musical examples in this book. Chaitin, Gregory. "Randomness and Mathematical Proof". Scientific American 232, no. 5 (May 1975): 47-52. An enlightening way of defining the meaning of "random pattern", and the unexpected and deep resonances with GSdel's incompleteness theorem and other metamathematicat results. Charniak, Eugene, C. K. Riesbeck, and Drew V. McDermott. Artifictal Intelligence Programming. Hillsdale, NJ.: Lawrence Erlbaum Associates, 1980. Sophisticated ways of using Lisp and Lap-like languages in artificial-intelligence research. Collet, Pierre and Jean-Pierre Eckmann. Iterated Maps on the Interval as Dynamical Systems. Boston: Birkhauser, 1980. An in-depth study of the iteration of simple smooth functions on the interval [0,1], and the resulting roads to turbulent behavior as parameters are varied. Compugraphic Corporation. A Portfolio of Text and Display Type. Wilmington, Mass.: Compugraphic Corporation, 1982. A collection of many typefaces (mostly book faces), including several extensions to other alphabets of faces originally conceived only for our alphabet. Conway, John Horton, Elwyn Berlekamp, and Richard K`Guy. Winning Ways (for your mathematical plays).' New York: Academic Press, 1982. A two-volume set of remarkable games, some analyzed, some unanalyzed, filled with humorous pictures and an oddball type of creative wordplay that is Conway's hallmark. Included in Volume 2 are discussions of the Cube and Conway's game of Life. Coueignoux, Philippe. "La reconnaissance des caractcres". La Recherche 12, no. 126 (October, 1981): 1094-1103. An interesting article about the workings of some computer systems that can read text in a variety of typefaces. The ideas derive from work by Blesser and colleagues (see above). This work is rather practically oriented, and does not come close to giving computers an understanding of letterforms in their

full generality. Csanyi, Vilmos. General Theory of Evolution. Budapest: Akademiai Kiad6, 1982. A thorough investigation of the process of simultaneous evolution on both genetic and "memetic" fronts. Davies, Paul. God and the New Physics. New York: Simon & Schuster, 1983. In this book, Davies tackles the biggies of metaphysics: creation, free will, religion, souls, and more. Since he is a good scientist as well as a good writer, his musings are articulate and penetrating.

-----Other Worlds New York Simon & Schuster, 1980 A popular account , by a highly reliable professional, of the mysteries at the base of quantum mechanics. Davis, Morton D. Game Theory: A Nontechnical Introduction. New York: Basic Books, 1983. An excellent overview of all the main ideas of game theory, including many unresolved issues such as the Prisoner's Dilemma. Dawkins, Richard. The Se#ish Gene. New York: Oxford University Press, 1976. A book that views organisms as by-products of a purely molecular-level competition for efficient self- replication. A topsy-turvy, disorienting, yet powerfully revealing viewpoint. DeLong, Howard. A Profile of Mathematical Logic. Reading, Mass.: Addison-Wesley, 1970. A wonderful book on the philosophical and technical issues of logic by someone who knows how to achieve an artistic balance between formalisms and ideas that appeal to the intuition. Dennett, Daniel C. Brainstorms: Philosophic Essays on Mind and Psychology. Cambridge, Mass.: Bradford Books, MIT Press, 1978. A collection of penetrating analyses of problems of mind, brain, and computer models of thought, perception, and sensation. Excellent rebuttals of such figures as B. F. Skinner and J. R. Lucas, and a wonderful "dessert" at the end. Dennett's graceful style and comparative lack of in-references and jargon make this book much more engaging than the average philosophy book. -----"Can Machines Think?" Unpublished manuscript. Afresh look at the power of the Turing Test, completely in sympathy with my view that the test as originally posed is, as valid as ever, despite the doubts of many. -----Cognitive Wheels: The Frame Problem of Artificial Intelligence". In Minds, Machines, and Evolution. Edited by C. Hookway. New York: Cambridge University Press, 1985. An article about why artificial intelligence is so far from achieving common sense. -----Elbow Room: The varieties of Free Will Worth Wanting. Cambridge, Mass.: Bradford Books, MIT Press, 1984. One provocative metaphor after another, all building up towards an image of "self-made selves" that enjoy as much free will as it is reasonable to hanker after. Although I resist some of this book's conclusions, I find it the

best writing on the subject that I know. -----The Logical Geography of Computational Approaches (A View from the East Pole)". Unpublished manuscript. Dennett wittily divides the world of Al approaches into two camps: the orthodox one (High Church Computtionalism, centered on the "East Pole" (located at MIT), and the unorthodox one ("New Connectionism"), scattered hither and yon. -----The Myth of the Computer: An Exchange". New York Review of Books. (June 24 1982): a civil reply to John Searle´s biting review of The Mind's I. -----The Self as a Center of Narrative Gravity". In Self and Consciousness, edited by P. M. Cole et al. New York: Praeger, 1985. A wonderful new metaphor for thinking about abstractions such as "I". Dewdney, A. K. "Computer Recreations: A computational garden sprouting anagrams, pangrams, and few weeds Scientific American 251, no. 4 (October 1984): 20-27. Includes a description of Lee Sallows' pangram machine, concluding with a public challenge to discover a computer-generated pangram. DeWitt, Bryce S. and Neill Graham, eds. The Many- Worlds Interpretation of Quantum Mechanics Princeton NJ. Princton University Press 1973. A well-rounded presentation of one of the most disorienting yet irrefutable ways of thinking about reality yet invented. Dyer, Michael. In-Depth Understanding. Cambridge, Mass.: MIT Press, 1983. A book summarizing a Ph.D. project in language understanding that puts together many recent Al ideas about how memory is organized and how flexible control structures fit into the picture,, Dylan, Bob. Tarantula. New York: Macmillan, 1971. The poet-singer lets loose some stream- of-consciousness musings that are sometimes reasonably intelligible and sometimes totally wacko. Edson, Russell. The Clam Theater. Middletown, Conn.: Wesleyan University Press, 1973 Strange and surrealistically written fantasies permeated by a tragic vision of life. To

me, the most haunting passage is a description of a human head: "this teetering bulb of dread and dream ...". Eidswick, Jack. "How to Solve the n x n X n Cube". Mathematics and Statistics Department, University of Nebraska, Lincoln, 1982. A useful manual for those beset by generalized cubic frustration. Endl, Kurt. Rubik's Cube Made Simple; The Pyramid; Pyraminx Cube; Impossiball; Megaminx; Rubik's Master Cube. Giessen, Germany: WUrfel-Verlag GmbH, 1982. These booklets, together with the previous entry, will give you a good reference shelf on Cubology. Erman, Lee D. et al. "The Hearsay-II Speech-Understanding System: Integrating Knowledge to Resolve Uncertainty". ACM Computing Surveys 2, no. 2 (June 1980): 213-53. A review article describing, with a good deal of hindsight, the architecture and performance of what I consider to be the most inspiring work yet

done in artificial intelligence. Evans, Thomas G. "A Program for the Solution of a Class of Geometric-Analogy Intelligence Test Questions". In Semantic Information Processing, edited by Marvin Minsky. Cambridge, Mass.: MIT Press (1968): 271-353. Perhaps the first truly large system ever written in Lisp, this impressive project is often pointed to as having "solved" the problem of analogies. How far from the truth that is! Ewing, John and Czes Koiniowski. Puzzle It Out: Cubes, Groups, and Puzzles. New York: Cambridge University Press, 1982. Another lively and mathematically interesting book about the Cube and its variants. Fahlman, Scott E., Geoffrey Hinton, and Terrence J. Sejnowski. "Massively Parallel Architectures for AI: NETL, Thistle, and Boltzmann Machines". In "Proceedings of the AAAI-83 Conference", Washington, D. C., August, 1983. A comparison of some recent ideas for AI architectures, including ones inspired by physics, in which statistical emergence plays a central role. Falletta, Nicholas. The Paradoxicon. New York: Doubleday, 1983. An excellent collection of paradoxes of all sorts, ranging from Zeno and Epimenides to modern-day voting paradoxes, optical illusions, and antinomies in the philosophies of science and mathematics. Fauconnier, Gilles. Espaces Mentaux: Aspects de la construction du seas dans les langues naturelles. Paris: Les Editions de Minuit, 1984. A probing inquiry into how we make sense of frame-crossing and counterfactual statements of this sort: "If Clark Gable had been a woman, Scarlett O'Hara would have been a man". Full of ideas about reference, identity, slippability, and essence. Feigenbaum, Mitchell. "Universal Behavior in Nonlinear Systems". Los Alamos Science 1, no. 1 (Summer 1981): 4-27. An excellent introduction to the studies of chaos that come from iterating simple functions. Excellent graphics, some of which are reproduced in Chapter 16. Feldman, Jerome and Dana Ballard. "Connectionist Models and Their Properties". Cognitive Science 6, no. 3 (July-September 1982): 205-54. One of several intriguing approaches to computational collectivism currently being investigated in cognitive science. Like most such models, this one is strongly influenced by ideas about human perception. Feynman, Richard P. The Character of Physical Law. Cambridge, Mass.: MIT Press, 1967. The transcripts of five marvelous lectures delivered at Cornell University in 1964 by a physicist who is not only sharp as a nail but also sparklingly witty. Feynman, Richard P., Robert B. Leighton, and Matthew Sands. The Feynman Lectures in Physics. Reading, Mass.: Addison-Wesley, 1965. Lectures given to beginning students, often more suitable for advanced students, filled with the excitement of science and the peppery observations of Feynman. Franke,

H. W. Computer Graphics-Computer Art. New York: Phaidon, 1971. By far the best collection of examples and discussion of computers and art I have yet seen, even though it is quite old by now. Frey, Alexander H., Jr. and David Singmaster. Handbook of Cubik Math. Hillside, NJ.: Enslow, 1982. The group-theoretical ideas behind the cube are developed systematically, for possible use in an advanced high-school or college-level course.

Friedman, Daniel P. The Little LISPer. Chicago: Science Research Associates, 1974. an engaging and elegant introduction to the recursive ideas of Lisp, by one of its most ardent and accomplished practitioners. Fromkin, Victoria A, ed. Errors in Linguistic Performance: Slips of the Tongue, Ear, Pen, and Hand. New York: Academic Press, 1980. A compendium of articles on how we can infer general mechanisms of thought from observing everyday surface-level quirks that show up ubiquitously in speech, typing, handwriting, listening, and so on. Frutiger, Adrian. Type Sign Symbol. Zurich: Editions ABC, 1980. This book by the creator of Frutiger and Univers, two of today's most popular and elegant sans-serif typefaces, deals with the interaction of technical constraints and artistic creation, and features many beautiful letterforms and styles. Gablik, Suzi. Progress in Art. New York: Rizzoli International, 1976. A heretical theory suggesting that there is a reason why art is where it is today, and that art follows a comprehensible trajectory in some abstract space, even if it is explicable only after the fact. Gardner, Martin. Fads and Fallacies. New York: Dover, 1952. A book that comes about as close as one could hope to being a course on common sense. Many chapters of this classic bunk-puncturer should be part of the cultural education of everyone. Gardner, Martin. "Mathematical Games: White and brown music, fractal curves, and one- over-f fluctuations". Scientific American 238, no. 4 (April 1978): 16-32. A solid introduction to the concepts of fractals and multi-level statistical structures. Gardner, Martin. Science: Good, Bad, and Bogus. Buffalo: Prometheus Press, 1981. Following in the footsteps of Fads and Fallacies, this book sharp-swordedly decapitates one dragon of hokum after another-and yet sadly, like a hydra's many heads, they always seem to pop back up again. Gardner, Martin. Wheels, Life, and Other Mathematical Amusements. New York: W. H. Freeman, 1983. Gardner's final collection of his sparkling Scientific American columns, showing why mathematics is the ultimate metamagic. Gebstadter, Egbert B. Thetamagical Memas: Seeking the Whence of Letter and Spirit. Perth: Acidic Books, 1985. A curious pot-pourri, bloated and muddled-yet remarkably similar to the present work.

This is a collection of Gebstadter's monthly rows in Literary Australian together with a few other articles, all with prescripts. Gebstadter is well known for his love of twisty analogies, such as this one (unfortunately not found in his book): "Egbert Gebstadter is the Egbert Gebstadter of indirect self-reference." Geisel, T. and J. Nierwetberg. "Universal Fine Structure of the Chaotic Region in Period- Doubling Systems". Physical Review Letters 47, no. 14 (October 5, 1981): 975-78. An investigation turning up remarkable order deep in the heart of chaos. Gentner, Dedre. "Structure-Mapping: A Theoretical Framework for Analogy". Cognitive Science 7 (1983): 155-70. One in a series of papers attempting to draw guidelines that will help distinguish good analogies from bad. Gödel, Kurt. On Formally Undecidable Propositions in "Principia Mathematica" and Related Systems. Translated by Bernard Meltzer, edited and with an introduction by R. B. Braithwaite. New York: Basic Books, 1962. The fundamental work that opened up worlds to logicians, philosophers, computer scientists, and others. Golden, Michael. "Don't Rewrite the Bible". Newsweek (November 7,4983):47. This piece sounds almost like my "Person Paper" in the way it exploits crude mockery of progressive new usages in order to make oppressive old usages sound good. The difference is that Golden is not being sarcastic. Golomb, Solomon. "Rubik's Cube and Quarks". American Scientist 70, no. 3 (May June 1982): 257-59. In which Golomb puts forth his analogy between twisted corners on the Cube and fractionally charged subatomic particles. Gonick, Larry and Mark Wheelis. A Cartoon Guide to Genetics. New York: Barnes & Noble, 1983. A short and snappy-but most informative and entertaining-overview of molecular biology, genetics, and their human import. Gould, Stephen Jay. Hen's Teeth and Horse's Toes. New York: W. W. Norton, 1983. Written in a lively and engaging way, this book (like its predecessors, Ever Since Darwin and

The Panda's Thumb) relates with great clarity the issues of evolution as illustrated in nature's unbelievable variety of quirks. Gray, J. Patrick and Linda Wolfe. "The Loving Parent Meets the Selfish Gene". Inquiry 23: 233-42. A cogent set of arguments against the pessimistic theses of Louis Pascal, to which he then replies (see below). Grossman, I. and W. Magnus. Groups and Their Graphs. New York: Random House New Mathematical Library, 1975. An excellent visual introduction to group theory, featuring so-called "Cayley diagrams", which lay bare the structure of a group in a marvelously clear way. Ground Zero. Nuclear War: What's in It for You? New York: Pocket Books, 1982. A dispassionate, calmly reasoned discussion for

"just-plain folk" of what it means for countries to make and threaten each other with nuclear weapons. The best primer that I have come across on the subject, and one that I wish everyone would read and take to heart. Guillemin, Victor. The Story of Quantum Mechanics. New York: Scribner's, 1968. A thoughtful survey of where quantum mechanics came from and what it has revealed about the physical world, concluding with a long discussion of the philosophical implications of quantum mechanics for such things as free will and causality. Haab, A,, A. Stocker, and W. Hattenschweiler. Lettera 1 and Lettera 2. Arthur Niggli, 1954 and 1961. Some deliciously fanciful alphabets are featured in these books. Books like these ought to make anyone marvel at the fluidity of letters and human perception. Hachtman, Tom. Double Takes. New York: Harmony Books, 1984. Two-in-one caricatures, done in a very satisfying way. It makes one wonder: could a computer ever do this kind of thing? Hansel, C. E. M. ESP and Parapsychology: A Critical Re-Evaluation. Buffalo: Prometheus Books, 1980. A scholar looks at the claims of parapsychologists and finds them wanting. Hanson, Norwood Russell. Patterns of Discovery. New York: Cambridge University Press, 1969. A philosophically rich discussion of how physical concepts progressed by fits and starts through the centuries, culminating in the strange world of elementary particles that we are now finding are not so elementary. Hardin, Garrett. "The Tragedy of the Commons". Science 162, no. 3859 (December 13, 1968): 1243-48. Using the metaphor of shared grazing land that gets ruined by overuse without any specific person being responsible, Hardin argues with great force that people's narrow-minded selfishness will drive us to extinction unless we band together and form strong organizations dedicated to global ecological goals, particularly population control. Harel, David. "Response to Scherlis and Wolper". Communications of the ACM 23, no. 12 (December 1980): 736-37. An amusing list of tricky self-references known to Harel, sporting a footnote claiming to be the first published example of "a reference to the very self-reference being discussed in the very letter being read!" Hart, H. L. A. "Self-Referring Laws". In Festskrift Tillagnad Karl Olivecrona. Stockholm: Kungliga Boktryckeriet, P. A. Norstedt och Soner, 1964. A reply to Alf Ross (see below), in which Hart, perhaps today's leading philosopher of law, claims that self-amending laws are legally possible. Harth, Erich. Windows on the Mind: Reflections' on the Physical Basis of Consciousness. New York: William Morrow, 1982. Lively discussions of brain, mind, consciousness, and how they all tie together, by a physicist with a philosophical bent. Haugeland, John, ed. Mind Design: Philosophy,

Psychology, and Artificial Intelligence. Cambridge, Mass.: Bradford Books, MIT Press, 1981. A self-proclaimed sequel to Alan Ross Anderson's Minds and Machines, now that artificial intelligence has had a couple of decades to develop. This volume is of uneven quality, but it contains many articles sure to provoke thought. Heiser, Jon F. et al. "Can Psychiatrists Distinguish a Computer Program Simulation of Paranoia from the Real Thing? The Limitations of Turing-Like Tests as Measures of the Adequacy of Simulations". Journal of Psychiatric Research 15, no. 3 (1979): 149-62. Researchers who developed the program called "Parry" claim that the Turing Test's validity is cast in doubt because Parry passed a pseudo-Turing Test.

Hinton, Geoffrey and James Anderson, eds. Parallel Models of Associative Memory. Hillsdale, N .J.: Lawrence Erlbaum Associates, 1981. A collection of articles exploring different models, all of which are based on the thesis that human perception and memory are statistically emergent phenomena and are best modeled as such. Hintze, Wolfgang. Der Ungarische Zauberwiirfel. Berlin: VEB Deutscher Verlag der Wissenschaften, 1982. This is an excellent book about the Cube, including new mathematical results on subgroups. Serious cubists who can read German should obtain this book. Hobby, John, and Gu Guoan. "A Chinese Meta-Font". Stanford, Calif.: Stanford University Computer Science Department Technical Report STAN-CS-83-974, 1983. A description of a system for creating Chinese characters whose style is "tunable" to some extent. This system is very similar in some ways to Han Zi, the variable-style Chinese-character- generation system developed by David Leake and myself at Indiana, at about the same time. Hodges, Andrew. Alan Turing: The Enigma. New York: Simon & Schuster, 1983. The definitive biography of this extremely important figure in mathematics and computer science, written with empathy, insight, and charm. Hofstadter, Douglas R. Ambigrams. Forthcoming in 1985 from the Centre d'Art Contemporain (Geneva, Switzerland). A collection of ambigrams (or "inversions", as Scott Kim prefers to call them) aptly subtitled "A Panoply of Palindromic Pinwheels". The foreword is by Scott (to whose book I symmetrically wrote the foreword). Also included are a lecture on ambigrams (in French) and an interview (in English). -----Analogies and Metaphors to Explain Godel's Theorem". Two-Year College Mathematics Journal 13, no. 2 (March, 1982): 98-114. A collection of simple images and ideas that help to build up one's intuitions to the point where one can fully digest the intricacies of Godel's clever construction. -----The Architecture of Jumbo". In "Proceedings of the Second Machine Learning Workshop", Monticello, Illinois,

1983. A description of the architecture of a biologically- inspired Al system that exploits parallelism and randomness in order to build up "well- chunked wholes" out of isolated parts and then to allow them to seek maximal "happiness" by internally reconfiguring themselves in a manner governed by a computational temperature. -----The Copycat Project: An Experiment in Nondeterminism and Creative Analogies". Cambridge, Mass.: MIT Artificial Intelligence Laboratory Al Memo 755, April 1984. A description of ongoing research in my group, first at Indiana, then at MIT, and now at Michigan. The goal is to make a system capable of doing analogies in a tiny domain, but with the insight (and short sight) of humans. Describing how the jumbo architecture can be adapted to this task is the burden of this paper. . -----512 Words on Recursion". Math Bulletin, Bronx High School of Science (1984): 18-19. A recursively structured article, which quotes a compressed version of itself (in which, of course, a more compressed version is quoted, etc.). -----Gödel, Escher, Bach: an Eternal Golden Braid. New York: Basic Books, 1979. Originally titled "Gödel's Theorem and the Human Brain", this book tries to build up the concepts necessary to show how ideas that arise in Gödel's proof will one day be at the core of explanations of consciousness and the meaning of the word "I". Analogy, humor, and contrapuntal dialogues are essential features of GEB. -----Gridfonts". Unpublished manuscript, 1984. A still-growing collection of (currently) about 300 skeletal typefaces-that is, distinctive and artistically consistent ways of rendering all 26 letters in a highly confined grid. The purpose is to provide material for discussion of the roots of style and the fluid nature of categories. -----On Seeking Whence". Unpublished manuscript, 1982. A discussion of the immense difficulty of extrapolating linear patterns, and its relationship to such deeply human experiences as scientific induction, analogy-making, understanding music, and creativity. -----Poland: A Quest for Personal Meaning". Poland (May, 1981): 42-47. A compression of a longer piece called "Poland: A Mythical Quest", describing my powerful emotional reactions to Poland on my first visit there, in 1975.

-----In Search of Essence". Unpublished manuscript, 1983. A discussion of what the "essence" of a written passage is, by way of a description of problems encountered in translating the dialogue Controcrostipunctus (from C,6, Escher, Bach) into French. -----Simple and Not-So-Simple Analogies in the Copycat Domain". Unpublished manuscript. A collection of 84 analogy problems in the Copycat domain that show how diverse the tiny alphabetic universe can be. Hofstadter, Douglas R., Gray Clossman, and Marsha Meredith. "Shakespeare's Plays Weren't Written by Him, but by Someone

Else of the Same Name". Bloomington: Indiana University Computer Science Department Technical Report 96, 1980. "A study of intensionality in frame-based representation systems" is the subtitle. The paper's main purpose is to discuss the relationship between slots that an entity fills, and that entity's identity. The notion of "Core ID" is presented and explored in an analysis of the title sentence. Closely related to the problems discussed by Fauconnier (see above). Hofstadter, Douglas R. and Daniel C. Dennett, eds. The Mind's : Fantasies and Reflections on Self and Soul. New York: Basic Books, 1981. Our purpose was to jolt people on all sides of the fence in this anthology of fictional and evocative pieces on the curious fact (or illusion) that something we call an "I" is somehow connected to some hunk of matter floating somewhere and somewhen in some universe. Holland, John et al. Induction: Processes of Inference, Learning, and Discovery. Forthcoming. A wide-ranging study of how learning takes place in genuine human minds, and how aspects of it might be modeled in computer simulations. This pioneering work is by a computer scientist, two' psychologists, and a philosopher, and its breadth reflects theirr diversity. Hollis, Martin and Steven Lukes, eds. Rationality and Relativism. Cambridge, Mass.: MIT Press, 1982. Showing how scholars can get mired in the endlessly circular reasoning that arises when any system of belief tries to provide its own justification. Reminiscent of "MUnchhausens Zopf": the quandary of Baron MUnchhausen trying to pull himself out of a quicksand quagmire simply by tugging on his own braid. Hopfield, J. J. "Neural networks and physical systems with emergent computational abilities". In Proceedings of the National Academy of Sciences 79, Washington, D.C., 1982: 2554-58. A system that makes use of statistics and parallelism to model familiar properties of the mind: reconstructing a full memory from a partial one, generalizing, and so on. How to Learn Lettering. Hong Kong: Nam San Publisher, n.d. A collection of Chinese characters in modern artistic styles, mostly for the use of advertisers, but also a treasure trove for those interested in the elusive "sameness" we see in wildly different renderings of a single Platonic essence. Huff, William. "A Catalogue of Parquet Deformations". School of Architecture, State University of New York at Buffalo. Approximately 35 parquet deformations created by students in William Hull's studio, assembled and commented on by Huff. Hughes, Patrick and George Brecht. Vicious Circles and Infinity: An Anthology of Paradoxes.

New York: Penguin, 1975. A' delightful and provocative collection of paradoxical material and choice epigrams embodying paradoxes of every conceivable sort. Includes lengthy discussions of the paradox of the Unexpected Examination, also known as the "Hangman's Paradox". Huneker, James Gibbons. Chopin: The Man and His Music. New York: Dover, 1966. Originally published around the turn of the century, this romantic biography features florid prose so rich that it verges on meaninglessness, and yet it is wonderfully evocative. Jaspert, W. Pincus, W. Turner Berry, and A. F. Johnson. The Encyclopaedia of Type Faces. Poole, England: Blandford Press, 1983. An engrossing catalogue of over 1,000 typefaces. One of its unique features is its thorough crediting of designers: the people whose exquisitely developed sense of line and space is far too often completely taken for granted. An index to designers and an index to typefaces are included. This way you can get a sense for the stylistic range of various designers. Johnson-L'Laird, P. N. and P. C. Wason, eds. Thinking. New' York: Cambridge University Press, 1975. A diverse collection of pieces by top-notch authors about nearly

all aspects of human thought, including imagery, perception, inference, categories, memory, language, and so on. Kadanoff, Leo. "Roads to Chaos". Physics Today 36, no. 12 (December 1983): 46-53. A good summary of the connection between mathematical approaches to chaos and the physical phenomena to be explained. Kamack, H. J. and T. R. Keane. "The Rubik Tesseract". Unpublished manuscript, 1982. A companion piece to the one by Eidswick (see above), this discussion of a 3 x 3 x 3 x 3 "Rubik's hypercube" is a tour de force in visualization-for its readers almost as much as for its authors! Kahneman, Daniel and Amos Tversky. "The Simulation Heuristic". In Judgment Under Uncertainty: Heuristics and Biases, edited by Daniel Kahneman, P. Slovic, and A. Tversky. New York: Cambridge University Press, 1982: 202-8. In what ways are people inclined to let situations mentally glide into alternate versions of themselves, and how do subtle cognitive pressures modify those tendencies? Two outstanding cognitive psychologists here describe their findings about this sort of slippability or "alternity" in their subjects' minds. Kanerva, Pentti. Self-Propagating Search: A Unified Theory of Memory. Stanford, Calif.: Center for the Study of Language and Information, Technical Report, Stanford University, 1984. A neurocomputational theory of memory: How to make similarity-sensitive, reconstructive software out of statistically robust addressing hardware. This may sound a bit abstruse, but in my opinion Kanerva's elegant work constitutes one

of the most important steps toward reconciliation of fluidity and mechanism-mind and brain -that I have seen taken. Kennedy, Paul E. Modern Display Alphabets. New York: Dover, 1974. An excellent collection of visually attractive letterforms in styles of all sorts, and exhibiting all degrees of wildness. Kim, Scott E. "The Impossible Skew Quadrilateral: A' Four-Dimensional Optical Illusion". In Proceedings of the 1978 AAAS Symposium on Hypergraphics: Visualizing Complex Relationships in Art and Science. Boulder, Colo.: Westview Press, 1978. Like the work by Kamack and Keane (see above), this article takes a powerful visual imagination to write or to read. The familiar "impossible triangle" is here carried one step further, by a bold process of analogy. The writing style is full of typical Kimian recursive trickery and parallel passages. -----Inversions. Peterborough, N.H.: Byte Books, 1981. A collection of inversions (or "ambigrams", as I prefer to call them) aptly subtitled "A Catalogue of Calligraphic Cartwheels". The foreword is by myself (to whose book Scott symmetrically wrote the foreword). The prose is as full of illusions and tricks of parallelism as the drawings are, although it is not immediately apparent. -----Noneuclidean Harmony". In The Mathematical Gardner, edited by David A. Klarner. Belmont, Calif.: Wadsworth International/Prindle, Weber, and Schmidt, 1981. A serious treatise on atonal geometry masquerading as a piece of humor. Describes Georg Cantor's important results on supersonic pitches, 2 against 3 correspondence, and uncountable rhythms. -----Visual Art: The Creative Cycle". Response, no. I (December, 1981). Minnesota Artists Exhibition Program. A short article putting forth a thesis about creative activity, at the heart of which is a loop similar to the one I describe in the P.S. to Chapter 12 of this book. Kirkpatrick, S., C. D. Gelatt, Jr., and M. P. Vecchi. "Optimization by Simulated Annealing". Science 220, no. 4598 (May 13, 1983): 671-80. An article describing a new statistical technique for seeking the optimal state of a system with a huge number of degrees of freedom, based on local improvement modulated by occasional local degradation, the amount of which is determined by a "cooling schedule", analogous to the annealing of a metal to strengthen it. Kleppner, Daniel, Michael G. Littman, and Myron L. Zimmerman. "Highly Excited Atoms". Scientific American 244, no. 5 (May 1981): 130-49. A bridge between microscopic quantum-mechanical phenomena and macroscopic classical phenomena is provided by the study of "Rydberg atoms", with which this paper is concerned.

Knuth, Donald. "The Concept of a Meta-Font". Visible Language 16, no. 1 (Winter 1982): 3- 27. Knuth describes his program, METAFONT, for creating an entire family of typefaces at one fell swoop, by parametrizing all

letters of the alphabet with a consistent set of parameters. This is the paper that triggered my response printed as Chapter 13. -----TEX and Metafont: New Directions in Typesetting. Bedford, Mass.: Digital Press, 1979. Knuth describes in detail how to use his programs that facilitate typesetting and letter design. Kobylariska, Krystyna. Chopin in His Own Land. Cracow: Polish Music Publishers, 1956. A collection of hard-to-find Chopiniana, beautifully reproduced in large format. Koestler, Arthur. The Act of Creation. New York: Dell, 1964. The great novelist and amateur psychologist delves into his own mind to come up with interesting but often wrong-headed speculations on humor, creativity, and insight. -----The Roots of Coincidence: An Excursion into Parapsychology. New York: Vintage, 1972. Koestler reveals his belief in the occult, somewhat reminiscent of Arthur Conan Doyle's belief in fairies. Kolata, Gina. "Does Godel's Theorem Matter to Mathematics?" Science 218 (November 19, 1982): 779-80. An excellent description of how the specification of what today would be considered "large integers" depends on abstruse concepts from mathematical logic. Koning, H. and J. Eizenberg. "The language of the prairie: Frank Lloyd Wright's prairie houses". Environment and Planning B, 8 (1981): 295-323. A description of how pseudo- Frank-Lloyd-Wright houses can be generated from a "shape grammar". Kripke, Saul. Naming and Necessity. Cambridge, Mass.: Harvard University Press, 1972. This theory of extensions, intensions, "rigid designators", and identity is. in direct opposition to my views (put forward in the "Shakespeare" paper cited above) that the roots of identity come from patterns of embeddedness in a network. Kuwayama, Yasaburo. Trademarks and Symbols, Volume 1: Alphabetical Designs. New York: Van Nostrand Reinhold, 1973. A celebration of the craziness of letterforms, this collection contains letters to boggle anyone's mind. Larcher, Jean. Fantastic Alphabets. New York: Dover, 1976. The letterforms in Kuwayama's book are highly imaginative, but by comparison, the letterforms in Larcher's book are downright zany. It just goes to show that a computer program that could deal with letters in their full complexity would be able to deal with the entire world. Lehninger, Albert. Biochemistry, 2d. ed. New York: Worth, 1975. A well-written treatise covering the huge field of biochemistry in a lucid manner. Lennon, John. In His Own Write and A Spaniard in the Works. New York: Simon & Schuster, 1964 and 1965. This Beatle had a wonderful sense of silliness, all his own. Stories, pictures, poems-even a little drama or two. Perhaps better than the Beatles' music, if I may venture a heretical opinion. Letraset, Inc. Graphic Art Materials Reference Manual. Paramus, NJ.: Letraset, Inc., 1981. This is the best inexpensive typeface

manual available, and is well worth the price. It contains nearly all the common typefaces, as well as many unusual ones. This is a great way to get into typefaces. Letraset, Inc. Letraset Greek Series. Athens: A. Pallis, 1984. This to me is an amazing catalogue of typefaces, because each and every one of them represents a "transalphabetic leap". Here we see such faces as Blanchard, Futura Black, Helvetica, Korinna, Optima, Souvenir, University Roman, Zipper, and a number of others-all in Greek! All I can say is, "Wow!" Levin, Michael. "Mathematical Logic for Computer Scientists". Cambridge, Mass.: MIT Laboratory for Computer Science Technical Report LCS TR 131, June, 1974. An unorthodox treatment of logic for those more comfortable with Lisp than with number theory. Lipman, Jean and Richard Marshall. Art about Art. New York: E. P. Dutton, 1978. An amusing annotated collection of self-conscious art, including pieces by Roy Lichtenstein, Andy Warhol, Robert Rauschenberg, Jasper Johns, Robert Arneson, Tom Wesselmann, Larry Rivers, Mel Ramos, Peter Saul, and many others.

Loeb, Marcia. New Art Deco Alphabets. New York: Dover, 1975. Showing how somebody can-perfectly recreate the spirit of an era in many different ways. These original alphabets all look like they came straight out of the 1930's. Compare with the books by Bush (see above), and McCall (see below). Lucas, J. R. "Minds, Machines, and Gbdel". Reprinted in Minds and Machines, edited by Alan Ross Anderson. Englewood Cliffs, NJ.: Prentice-Hall, 1964. The article that launched a thousand rebuttals. Although I find its conclusions totally unjustified, the issues are well raised and deserve to be thought about far more. Closely related to the issues discussed in the book by Webb (see below). Machlup, Fritz and Una Mansfield, eds. The Study of Information: Interdisciplinary Messages. New York: Wiley-Interscience, 1983. A multi-faceted collection of articles by high-level scholars about information theory, cybernetics, artificial intelligence, cognitive science, librarianship, and more. Many of the pieces are statements of opinion, and conflict with one another. This volume includes the exchange between Allen Newell and myself, which is continued in the P.S. to my Chapter 26. Mandelbrot, Benoit. The Fractal Geometry of Nature. New York: W. H. Freeman, 1982. This latest presentation of Mandelbrot's visions is rich in imagery and ideas. Fractal shapes constitute one of the twentieth century's most fertile mathematical playgrounds. Marek, George R. and Maria Gordon-Smith. Chopin. New York: Harper & Row, 1978. One of the many biographies of Chopin in English. I find it to be balanced and well written. Marx, George, Eva GajzSgo,

and Peter Gnadig. "The universe of Rubik's cube". European journal of Physics 3 (1982): 34-43. The implications of extending the concept of entropy to the surface of the Cube are reported on, with the results of several statistical studies done on computer. Max, Nelson. Space-Filling Curves. Chicago: International Film Bureau, Inc., 1974. A marvelous movie done with computer graphics showing the fascination of some of the earliest-discovered fractal curves. The computer-produced music adds extra appeal and eerieness. May, Robert. "Simple Mathematical Models with Very Complicated Dynamics". Nature 261, no. 5560 (June 10, 1976): 459-67. An early review article about the chaos one is led to when one iterates simple functions on the interval [0,1]. Very informative, except for the reversal of two figures! Maynard-Smith, John. Evolution and the Theory of Games. New York: Cambridge University Press, 1982. Showing how new depths of understanding of the mechanisms of evolution can come from modeling the interactions of organisms in a common environment in terms of mathematical game theory. McCall, Bruce. Zany Afternoons. New York: Alfred A. Knopf, 1982. A genius for capturing the flavor of things turns all his talents to recreating the twenties, thirties, forties, and fifties- not only in America but also abroad. This very funny book is an amazing achievement. Compare with the books by Bush and Loeb (see above). McCarthy, John. "Attributing Mental Qualities to Machines". In Philosophical Perspectives on Artificial Intelligence, edited by Martin Ringle, 161-95. Atlantic Highlands, N. J.: Humanities Press, 1979. Under what circumstances does it make sense to speak of machines having desires or beliefs? When to adopt this "intentional stance" is here discussed by one of the pioneers of artificial intelligence. -----History of Lisp". In History of Programming Languages, edited by Richard L. Wexelblatt, 217-23. New York: Academic Press, 1980. Lisp's genesis as recalled by its inventor. McCarty, L. T. and N. S. Sridharan. "A Computational Theory of Legal Argument". New Brunswick, NJ.: Rutgers University Computer Science Department Technical Report LPR- TR-13, January 1982. A professor of law and a computer scientist work together to implement "prototype deformation", which they consider the key to computer modeling of argumentation by precedent. McClelland, James L., David E. Rumelhart, and Geoffrey E. Hinton, eds. Interactive Activation: A Framework for Information Processing. Forthcoming. A collection of articles

on statistically emergent parallel computation featuring "temperature" as a regulator of randomness. McKay, Michael D. and Michael S. Waterman. "Self-Descriptive Strings". Mathematical Gazette 66, no. 435 (1982):

1-4. A mathematical study of a simple class of sentences that attempt to inventory themselves. Meehan, James R. "Tale-Spin, an Interactive Program that Writes Stories". In Proceedings of the 5th International Conference on Artificial Intelligence-1977, Vol. 1: 91-98. Pittsburgh: Department of Computer Science, Carnegie-Mellon University. One of the funniest (and therefore most sensible) articles ever written on computers and their "understanding" of language. Meehan explains how, in one "mis-spun tale", his program made gravity fall into a river and drown. Meehan's discussions of mis-spun tales in general are among the most illuminating passages I know on that perennial vexation: the fact that AI programs stubbornly resist acquiring common sense, no matter how hard or how often they are spanked. Miller, Casey and Kate Swift. The Handbook of Nonsexist Writing for Writers, Editors, and Speakers. New York: Barnes and Noble, 1980. A first-class book. It is a scandal that this book is not found on every newsman's desk. Thinking about these issues is not only socially important, but challenging and fascinating. Words and Women. New York: Doubleday, Anchor Press, 1977. A magnificent and devastating job of showing the absurdity of thinking that women have been dealt a fair hand by our society. If language is the thermometer of society, then this book reveals that collectively, we are gravely ill. Mills, George. "Gddel's Theorem and the Existence of Large Numbers". Northfield, Minnesota: Mathematics Department, Carleton College, October 1981. Showing how the descriptions of some stupendously large numbers can be obtained via recursive definitions of functions and the process of diagonalization. Repeated jootsing leads to some remarkable destinations! Minsky, Marvin. "A Framework for Representing Knowledge". In The Psychology of Computer Vision, edited by P. H. Winston. New York: McGraw-Hill, 1975. The paper that defined such now-central notions to AI as frames, slots, and default assumptions. -----Matter, Mind, and Models". In Semantic Information Processing, edited by Marvin Minsky. Cambridge, Mass.: MIT Press, 1968. Some cogent speculations about the meaning of the word "I" in computational terms. -----Why People Think Computers Can't". AI Magazine (Fall 1982): 3-15. With his usual unusual insight, Minsky tears people apart for not understanding how to think about thinking (or about machines, for that matter). Mondrian, Piet. Tout l'tEuvre Peint de Piet Mondrian. Paris: Flammarion, 1976. For a grand overview of the evolution of the style of one painter, I know of no better book than this, which traces Mondrian from his earliest representational paintings to his most abstract and geometrical ones, revealing

the sweep to be continuous and logical, but no less dramatic for that. Morrison, Philip and Phylis, and the Office of Charles and Ray Eames. Powers of Ten. New York: Scientific American Books, 1983. Kees Boeke's inspirational Cosmic View (see above) revisited some thirty years later, with considerably more commentary. A charming and . - worthy successor. Myhill, John. "Some Philosophical Implications of Mathematical Logic: Three Classes of Ideas". Review of Metaphysics 6, no. 2 (December 1952): 165-98. In 1982 I met Myhill and asked him about this paper. He told me he considered it to be a piece of junk. That astonished me, since I consider it to be a thoughtful and important piece of philosophizing making use of mathematical metaphors, something that hardly anyone dares to do. You never know how someone will evaluate their own work 30 years later! Nagel, Ernest, and J. R. Newman. Gödel's Proof. New York: New York University Press, 1958. A gracious and highly accessible introduction to the twists in Godel's reasoning, as well as to the philosophical issues surrounding his work.

Nakanishi, Akira. Writing Systems of the World. Rutland, Vt.: Tuttle, 1980. For a sampling of the many different spirits residing in letterforms, see this book. It features reproductions of newspaper pages showing each writing system in several different styles. Newell, Allen. "Physical Symbol Systems". Cognitive Science 4, no. 2 (April-June 1980): 135-83. A lengthy article putting forth the orthodox dogma on which artificial intelligence has traditionally considered itself founded: the idea that a universal computer embodies all the prerequisites for intelligent behavior. Norman, Donald. "Categorization of Action Slips". Psychology Review 88, no. 1 (January 1981): 1-15. A delightful compendium of types of error that people commit in performing everyday actions such as putting water on to boil, answering the telephone, unbuckling one's seatbelt, driving home from work, and so on. There is remarkable regularity behind the seeming chaos, and Norman's purpose is to chart and exploit that regularity in order to reveal hidden mechanisms of thought. Nozick, Robert. Philosophical Explanations. Cambridge, Mass.: Harvard University, Belknap Press, 1981. A very wide-ranging book on philosophy, intended for lay readers as well as for professionals. It covers matters from personal identity and the meaning of reference to free will and morality, and only occasionally lapses into brief spasms of absolutely inscrutable jargon. Parfit, Derek. Reasons and Persons. Oxford: Clarendon Press, 1984. A very thoughtful treatise on moral dilemmas and ethical behavior, rooted in close consideration of the deepest roots of caring: why do I care about my present and future self? Parfit knows that to make any serious attempt to

answer this riddle, one must look long and hard at the meaning of the word "I" in the real world and in many counterfactual ones, which he does with skill and insight. Pascal, Louis. "Human Tragedy and Natural Selection". Inquiry 21: 443-60. Taking up where Garrett Hardin left off (see above), Pascal paints a gloomy picture of a population explosion as the natural outcome of selection itself, something built into the nature of societies just as deeply as the sexual drive is built into individuals. "Rejoinder to Gray and Wolfe". Inquiry 23: 242-51. A bitter indictment of the human race's apathy before visibly onrushing catastrophe. Peattie, Lisa. "Normalizing the Unthinkable". Bulletin of the Atomic Scientists 40, no. 3 (March 1984): 32-36. Like Pascal, Peattie is concerned with people's apparent ability to turn off their sensitivities and to focus on the very local to such an extent that great tragedies are allowed to ensue. In a striking analogy, she likens the current public apathy about the arms madness to the inhumanity of collaborators in Hitler's concentration camps. Perec, Georges. La Disparition. Paris: Editions Denoel, 1969. If anything, writing without 'e's is harder in French than in English, yet here is an entire novel in that bizarre dialect. Naturally enough, its subject is the mysterious disappearance of item number five in a collection of twenty-six objects. It was probably inspired by the 'e'-less novel Gadsby, written in English by Ernest Vincent Wright in the late 1930's. Perfect, Christopher and Gordon Rookledge. Rookledge's International Typefinder. New York: Frederick C. Beil, 1983. A wonderful (though expensive) compendium of typefaces, indexed in such a way that you can look a typeface up by its features, thus allowing you to home in quickly on an unknown specimen instead of spending hours leafing through catalogues. Lovers of my "horizontal and vertical problems" will delight in this book. Phillips, Tom. A Humument: A Treated Victorian Novel. New York: Thames & Hudson, 1980. Like a child who has covered a wall with colorful crayon drawings, Tom Phillips has completely obliterated the pages of an old novel (A Human Document by W. H. Mallock) with his colorful scribblings, and only here and there do traces of the original show through. A droll stunt! Poincare, Henri. "On Mathematical Creation". In The World of Mathematics, vol. 4, edited by James R. Newman, 2041-50. New York: Simon & Schuster, 1956..A lecture presented to the Psychological Society in Paris in the early part of this century. Anticipating developments in cognitive science some eighty years later, Poincare speculates on the nature of the events taking place inside his skull as he makes mathematical discoveries.

Po1ya, George. How to Solve It. New York: Doubleday, 1957. P61ya, like Poincart- a mathematician fascinated by thought processes, attempts here to give recipes for how to attack mathematical problems. The problem with this is that there is-and can be-no failsafe recipe. Even trying to give guidelines is probably futile. The nose that smells the right route is simply rare, and there are no two ways about it. Post, Emil. "Absolutely Unsolvable Problems and Relatively Undecidable Propositions: Account of an Anticipation". In The Undecidable, edited by Martin Davis, 338-443. New York: Raven, 1965. In this paper, Post concludes that mathematicians' thought processes are essentially creative and non-mechanizable. Related to the article by Myhill (see above). Poundstone, William. The Recursive Universe: Cosmic Complexity and the Limits of Scientific Knowledge. New York: William Morrow, 1985. A superlative account of the reductionist miracle: fantastically complex entities-living, self-reproducing organisms-turn out to be vast arrays of very simply interacting parts. Von Neumann's trick of self- reproduction without infinite regress (adapted from Gödel) is one of the main topics explored here, and with the help of Conway's absorbing game of Life, which plays the starring role in his book, Poundstone does a masterful job of explaining how it comes about. Racter. The Policeman's Beard Is Half Constructed. New York: Warner Books, 1984. "Racter" is a program written by Bill Chamberlain and Thomas Etter. The Policeman's Beard is a book written by Racter. It is all somewhat tongue-in-cheek, because Racter does not really know much about half-constructed beards, but what is lovely about Racier's prose is the way it skirts the fringes of meaning, weaving drunkenly across the boundary between sense and senselessness. Rapoport, Anatol. Two-Person Game Theory. Ann Arbor: University of Michigan Press, Ann Arbor Science Library, 1966. A sound treatment of game theory, featuring a most .interesting personal discussion on opinions about the meaning of "rationality" in Prisoner's- Dilemma-like situations. Reps, Paul. Zen Flesh, Zen Bones. New York: Doubleday, Anchor Press, n.d. An easily available collection of Zen koans, highly amusing and, perhaps, even enlighteningprovided you take it all with sufficiently many grains of salt. Rogers, Hartley. Theory of Recursive Functions and Effective Computability. New York: McGraw-Hill, 1967. A standard reference work on many advanced concepts in metamathematics, including such concepts as "productive" and "creative" sets, referred to in my Chapter 13. Ross, Alf. "On Self-Reference and a Puzzle in Constitutional Law". Mind 78, no. 309 (January 1969): 1-24. A condundrum in the philosophy of law: Can laws modify themselves, or is

that paradoxical? Ross' view is that logical inconsistency is unacceptable in law, and therefore that self-amendment is impossible. For a response, see the paper by Hart (above). Rucker, Rudy. Infinity and the Mind. Boston: Birkhauser, 1982. A book that had to be written. Presenting the most abstruse concoctions of the mind in language that is not abstruse, and connecting it with thoughts about consciousness and the mystery of existence -this is what Rucker excels in. Ruelle, David. "Les Attracteurs Etranges". La Recherche 11, no. 108 (February 1980): 131- 44. A good article relating these wispy mathematical clouds to the physics they are supposed to explain, featuring a number of excellent illustrations. Rumelhart, David E. and Donald A. Norman. "Simulating a Skilled Typist: A Study of Skilled Cognitive-Motor Performance". Cognitive Science 6, no. 3 (JulySeptember 1982): 1-36. Anticipating the current "parallel distributed processing" project at the University of California at San Diego, the research described in this article is among the most interesting work on modeling human performance that I have encountered. Russett, Bruce. The Prisoners of Insecurity. New York: W.H. Freeman, 1983. The arms race as an iterated Prisoner's Dilemma, and how we might be able to break out of the deadlock. The last section-"Responsibility"--concludes with this admonition (and how I wish people would take it to heart!): "In a democracy, silence about nuclear issues carries an implication not just of indifference but of acceptance. If we stand silent in the face of an arms race-and

the war to which it may lead us-we must share responsibility for the outcome. `Silence gives consent.' " Ryder, Frederick, and Company. Ryder Types, 2 vols. (with periodic supplements). Chicago: Frederick Ryder and Company. The best catalogue of typefaces I have run across-but it is expensive. Some of the oddest faces I have ever seen are found in the four supplements I own. Sagan, Carl, ed. Communication with Extraterrestrial intelligence. Cambridge, Mass.: MIT Press, 1973.. An entertaining transcript of an international meeting in the days when Russians and Americans spoke to each other. Sagan puts forth his notion of various types of earth-life-based "chauvinisms". A hopeful and intellectually refreshing book-the kind one wishes there were hundreds of. Sampson, Geoffrey. "Is Roman Type an Open-Ended System? A Response to ,Douglas Hofstadter". Visible Language 17, no. 4 (Autumn 1983): 410-12. Sampson tlisputes my claim that it is impossible to capture the fluid spirit of letters of the alphabet in parametrized computer subroutines; he suggests that it is possible, if you limit your goals to capturing the spirit of letters suitable for printing

serious books in. Schank, Roger. Dynamic Memory: A Theory of Reminding and Learning in Computers and People. New York: Cambridge University Press, 1982. Although I disagree with some of his theorizing, I agree fully with Schank's focus on the types of problems that cognitive science ought to be most concerned with, and I like the examples he uses. Scherlis, William L. and Pierre L. Wolper. "Self-Referenced Referenced, and Self- Referenced". Communications of the ACM 23, no. 12 (December 1980): 736. A humorous short note on papers that cite themselves. Schrodinger, Ernst. What Is Life? and Mind and Matter. New York: Cambridge University Press, 1967 (reprint of 1944 edition). This philosophically-minded physicist prophetically speculates on the nature of the hereditary message, before the days when DNA's structure or function were known. Also venturing into the deep waters of consciousness, he comes up with this mystical conclusion: "The over-all number of minds is just one." Schwenk, Theodor. Sensitive Chaos. New York: Schocken, 1976. A book about fluids in the wild and in the laboratory, filled with striking patterns and fantastic photographs strongly suggesting this mystical conclusion: "The over-all number of fluids is just one." Searle, John. "Minds, Brains, and Programs". The Behavioral and Brain Sciences 3 (September 1980): 417-57. Like the Lucas article (see above), this one launched a thousand rebuttals (including two by me). In this, its original setting, it was followed by nearly thirty rebuttals and counter-rebuttals. It is amusing and educational to read them all. I view this article as a litmus test, in the sense that someone convinced by Searle's imagery is almost sure to have a very negative opinion of AI. -----The Myth of the Computer: An Exchange". New York Review of Books (June 24, 1982): 56-57. Searle portrays Dennett and me as blind advocates of "strong AI"-the notion that "the appropriately programmed computer literally has a mind". He resents the fact that such views are "well financed and backed by prestigious teams of research workers", and tells how he is constantly working toward "the relentless exposure of its preposterousness". -----The Myth of the Computer". New York Review of Books (April 29, 1982): 3-6. A rather negative review of The Mind's I by someone roundly criticized in the book. The one good thing Searle does in this review is to stress the central epistemological problem facing AI: to explain the nature of the fluid reference, or semanticity, that mental activity exhibits. Serafini, Luigi. Codex Seraphinianus. Milan: Franco Maria Ricci, 1981. A complete pseudo- encyclopedia, in two volumes. The writing system, the page numbering, the weird diagrams, and especially the wonderful color illustrations are all products of the cryptic mind of Serafini,

an Italian architect. Also available in one volume, and more inexpensively, from Abbeville Press in New York, N.Y. Seuss, Dr. On Beyond Zebra. New York: Random House, 1955. Humorous ways of extending the alphabet beyond 'z': a metaphor for jumping out of the system (' jootsing"). Simon, Herbert A. "Cognitive Science: The Newest Science of the Artificial". Cognitive Science 4, no. 2 (April June 1980): 33-46. Simon's confident assertion that computers

already have what it takes to possess full intelligence: symbol manipulation. In his conclusion, he claims: "Wherever the boundary is drawn, there exists today a science of intelligent systems that extends beyond the limits of any single species." -----Studying Human Intelligence by Creating Artificial Intelligence". American Scientist 69, no. 3 (May June 1981): 300-309. This is the lecture in which Simon spoke of the all- important 100-millisecond barrier, below which it is of no interest to cognitive scientists to know what happens (see my Chapter 26). In print he changed "100 millisecondsto "ten milliseconds", although the point remains the same either way. Singmaster, David. Notes on Rubik's "Magic Cube". Hillside, NJ.: Enslow, 1981. On its cover, this book proudly boasts: "'The definitive treatise.'-Scientific American. " Well, if Scientific American says so, who am I to dispute it? Sloman, Aaron. The Computer Revolution in Philosophy: Philosophy, Science, and Models of Mind. Atlantic Highlands, NJ.: Humanities Press, 1978. A book that warns philosophers that they will miss the boat if they don't jump on the Al bandwagon. This a good though somewhat tendentious discussion of the philosophical import of Al. Smith, Brian C. "Reflection and Semantics in Lisp". Palo Alto, Calif.: Xerox Palo Alto Research Center Report, 1983. A boiling-down of a 500-page Ph.D. thesis into a dozen pages or so, concerning a system capable of reasoning about itself (and reasoning about such reasoning, etc.). This work exemplifies the "meta-meta" style of Al research (see my Chapter 23-especially its P.S.). Smith, Stephen B. The Great Mental Calculators: The Psychology, Methods, and Lives of Calculating Prodigies. New York: Columbia University Press, 1983. A set of portraits of very strange yet very human beings whose aberrant minds let them do calculating tasks that we ordinary people-no matter how number-loving-could not conceivably do. Smolensky, Paul. "Harmony Theory: A Mathematical Framework for Stochastic Parallel Processing". University of California at San Diego Institute for Cognitive Science Technical Report ICS No. 8306. Based on the ideas of statistical mechanics, this project utilizes stochastic parallelism, regulated by a "temperature" that gradually drops to zero, to search most

efficiently for the optimal global state of a system. Smullyan, Raymond. This Book Needs No Title: A Budget of Living Paradoxes. Englewood Cliffs, NJ.: Prentice-Hall, 1980. A very humorous collection of observations about the constant intermingling of life and paradox, by a logician whose awareness of paradox is especially keen. Solo, Dan X. Sans Serif Display Alphabets. New York: Dover, 1979. A collection of elegant letterforms whose subdued flair resides exclusively in their gentle curves, stroke taperings, line endings, and the interplay between positive and negative space. -----Special-Effects and Topical Alphabets. New York: Dover, 1978. After you've looked at a book like this, you know why the problem of letterforms is synonymous with the problem of full human intelligence. Sonneborn, Tracy M. "Degeneracy of the Genetic Code: Extent, Nature, and Genetic Implications". In Evolving Genes and Proteins, edited by Vernon Bryson and Henry J. Vogel. New York: Academic Press, 1965. Perhaps the first paper to suggest that there is evolutionary rhyme and reason to the particular match-up between codons and amino acids that exists in the arbitrary-seeming genetic code. Soppeland, Mark. Words. Los Altos, Calif.: William Kaufmann, 1980. A witty collection of words drawn as self-referential pictures: stacks of books whose shapes spell out "books", and so on. Sorrels, Bobbye. The Nonsexist Communicator. Englewood Cliffs, NJ.: Prentice-Hall, 1983. A sizable collection of sexist usages and nonsexist remedies; some of the remedies, however, are needlessly awkward. Sperry, Roger. "Mind, Brain, and Humanist Values". In New Views on the Nature of Man, edited by John R. Platt. Chicago: University of Chicago Press, 1965. The article that asks, and tries to answer, the question "Who pushes whom around in the population of causal forces that occupy the cranium?" My answer is in Chapter 25.

Spinelli, Aldo. Loopings. Amsterdam: Multi-Art Points Edition, 1976. A somewhat clumsy realization of a good idea: a book whose pages are all self-inventorying sentences, or close to that. At the end, Spinelli discusses the kinds of locked-in loops and entryways into looping that can arise. Stanley, H. Eugene et al. "Interpretation of the Unusual Behavior of H2O and D20 at Low Temperature: Are Concepts of Percolation Relevant to the 'Puzzle of Liquid Water'?" Physica. 106a (1981): 260-77. An article that gives a fairly recent picture of the "flickering- cluster" view of water. Stein, Gertrude. How to I Write. Craftsbury Common, Vt.: Sherry Urie, 1977. (Originally published in 1931.) Classic volume of absurdities. It would be a nightmare to try to read the whole thing; each page is like a unique grain of sand, but all the pages taken together add up to a rather bland beach. Better to savor it in small

bits. Steiner, George. After Babel: Aspects of Language and Translation. New York: Oxford University Press, 1975. This fascinating exploration of the depths of personal meaning is full of obscurities, but it is still one of the best statements on the subtlety of language that 'I know. Strich, Christian. Fellini's Faces: 418 Photographs from the Archives of Federico Fellini. New York: Holt, Rinehart, and Winston, 1981. A celebration of the remarkable diversity of human physiognomies, as well as their amazing expressivity. Stryer, Lubert. Biochemistry. New York: W. H. Freeman, 1975. An elegantly produced text of biochemistry, on a slightly lower level than Lehninger. The figures-many in color -are especially appealing. Suber, Peter. "A Bibliography of Works on Reflexivity". Unpublished manuscript, 1984. An extensive collection of pointers to the vast universe of writings on self-modifying laws, self-referring literature, self-fulfilling prophecies, self-replicating machines, self-monitoring computer programs, and on and on. -----The Paradox of Self-Amendment: A Study of Logic, Law, Omnipotence, and Change. Forthcoming. This is the first (and only) book-length study of logical paradoxes in law. It focuses on one family of paradoxes (rules that authorize change being applied to themselves), but eventually tries to address the general problem of how legal reasoning copes with logical paradox. The game of Nomic is featured in an appendix. Thomas, Dylan. Collected Poems. New York: New Directions, 1953.1 am the first to admit I don't understand poetry well, but this beguiling collection, with its combination of beautiful language and bewildering opacity, leaves me especially disturbed. Thomas, Lewis. The Medusa and the Snail. New York: Viking, 1979. Short essays on science and life, some of which are very insightful, others of which I find puzzling or just plain silly. Turing, Alan. "Computing Machinery and Intelligence". Reprinted in Minds and Machines, edited by Alan Ross Anderson. Englewood Cliffs, NJ.: Prentice-Hall, 1964. In which the now-infamous "Turing Test" for machine thought is proposed. Lucid and straightforward, this article contains plenty of provocative ideas, even today. Turner-Smith, Ronald. The Amazing Pyraminx. Hong Kong: Meffert Novelties, 1981. A simple guide to the notation, group theory, and solution of the Pyraminx puzzle. Ulam, Stanislaw. Adventures of a Mathematician. New York: Scribners, 1976. A fascinating account of the intellectual life of a highly innovative and fun-loving mathematician, including some speculations on mind and consciousness. Vetterling-Braggin, Mary, ed. Sexist Language: A Modern Philosophical Analysis. Totowa, NJ.: Littlefield, Adams & Co., 1981. A valuable collection of articles from many perspectives on sexism. Includes one section on the comparison between

sexism and racism. von Neumann, John. Theory of Self-Reproducing Automata, edited and completed by Arthur W. Burks. Urbana, Illinois: University of Illinois Press, 1966. Here von Neumann describes how a machine could construct replicas of itself, or even machines more complex than itself, out of raw materials. At the core of this work by von Neumann, however, is

Gödel's method of achieving mathematical self-reference-a fact that many people seem to overlook or downplay. Walker, Alan, ed. The Chopin Companion. New York: W. W. Norton, 1966. An excellent collection of articles by composers, performers, and musicologists on Chopin, his music, and its influence. Watzlawick, Paul. Change. New York: W. W. Norton, 1974. A theory of psychological disorder as caused by encounters with paradox in daily living. The suggested therapy is to fight paradox with paradox (if that isn't paradoxical!). Webb, Judson. Mechanism, Mentalism, and Metamathematics. Hingham, Mass.: D. Reidel, 1980. A penetrating scholarly analysis of the import of the most important metamathematical work by Gddel, Church, Turing, Kleene, Tarski, Post, and others. In particular, it seeks to elucidate the relationship of the famous "limitative theorems" applicable to formal systems with attempts to mechanize human mental activity. In essence, its conclusion is that those results strengthen, rather than diminish, the notion that mental activity can in principle be mechanized. Wells, Carolyn. A Nonsense Anthology. New York: Dover Press, 1958. A wonderful collection of strange poems and silly snippets of pseudo-sense. Wheelis, Allen. The Scheme of Things. New York: Harcourt Brace Jovanovich, 1980. A moving story of human and animal attachments, and the emotional resonances of places and scenes. The story hints at many self-references, most notably to another novel called The Way Things Are, written by Wheelis' protagonist Oliver Thompson who, like Wheelis himself, is an unorthodox psychiatrist living in San Francisco. Wheelis within Wheelis! Williams, J. D. The Compleat Strategyst. New York: McGraw-Hill, 1954. One of the earliest and clearest books ever written on game theory. It is a very elementary book, with humorous drawings and droll stories to illustrate its points. Wilson, E. O. The Insect Societies. Cambridge, Mass.: Harvard University, Belknap Press, 1971. It is heavy going to read this book, but parts of it are engrossing, as they tell how order at a high level comes from the independent activity of low-level organisms acting without knowledge of one another. Winston, Patrick Henry. The Psychology of Computer Vision. New York: McGraw-Hill, 1975. Although fairly old by AI standards, this collection of six articles is still of considerable interest. One is Minsky's article on frames; another is

an article by Winston on learning and recognition; and another is an article by Waltz on economical strategies for vision in the "blocks world". Winston, Patrick Henry and Berthold Horn. Lisp. Reading, Mass.: Addison-Wesley, . 1981. A solid textbook on Lisp, starting right at' the beginning and going up to AI programming techniques. Yaguello, Marina. Alice au pays du langage. Paris: Editions du Seuil, 1981. A French linguist examines the phonetics, syntax, semantics, and gradual shifts of her own language to illuminate the strangeness of human thought. Many of the examples in the book are taken from popular language, slang, or humor, which makes it particularly unstuffy. -----Les mots et les femmes. Paris: Petite Bibliotheque Payot, 1978. On fighting the battle against sexist language in French-but unfortunately, because of the two-gender system of romance languages, eradication of sexism will prove far more difficult in those languages than in English (where it is already ferociously hard). Zapf, Hermann. About Alphabets. Cambridge, Mass.: MIT Press, 1960. A famous contemporary type designer describes his adventures among the alphabets of the world.

Appendix A: The Visibility Protocol

`[REDACTED]` This appendix contains the operational details of the scattering experiments performed at Salford. Due to the sensitive nature of the results, certain sections have been picowaved for extra security.

Appendix B: On the Lore of the Seen

A brief history of the words we use to describe that which we cannot see, from the Old English *unsewen* to the modern quantum *unobserved*.
